Five Year
Capital Forecast

2011 CAPITAL BUDGET PROCESS

- **The City's first Capital Budget public consultations December 6th and December 9th**
- **Infrastructure Funding Council**
- **Comprehensive Asset Management Initiative**
- **Standing Policy Committee Review and Council debate and adoption**

2011 CAPITAL BUDGET CONTEXT

- **Multi-year view**
- **Challenged by aging infrastructure and an infrastructure deficit**
- **Capital construction inflation not as high as in the recent past**
- **Government Partnerships**

HIGHLIGHTS

- **6 Year Capital investment plan of \$2.2 billion:**
 - **Commitment to the redevelopment of Assiniboine Park through the Assiniboine Park Conservancy - \$57.7 million**
 - **Public Safety - \$161.6 million including the new Police Headquarters and the Fire Paramedic facilities replacement plan**
- **\$370.1 million in 2011**
 - **PPP Canada funding of \$22.3 million for Chief Peguis Trail**
 - **University of Winnipeg - Soccer Complex - \$2 million**
- **Cash to Capital \$67.5 million in 2011 and growing annually by \$2 million**

AREAS OF MAJOR CAPITAL INVESTMENT

- **\$905.7 million for sewage disposal projects**
- **\$422.4 million for roads and bridges**
- **\$210.2 million for parks, community infrastructure and amenities**
- **\$171.5 million for the water system**
- **\$161.8 million for the transit system**
- **\$161.6 million for public safety infrastructure**
- **\$81.9 million for land drainage and flood control**

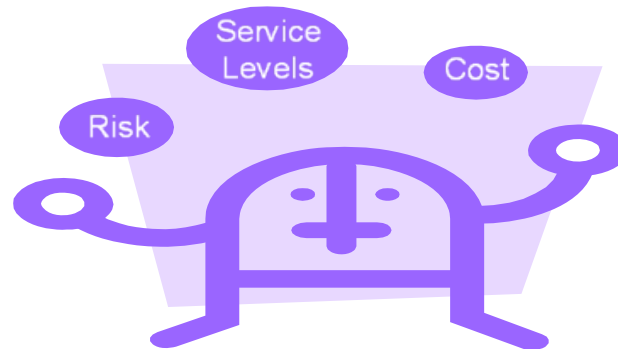

COMPREHENSIVE ASSET MANAGEMENT

Three Key Concepts

- Continuously delivering established levels of service
- At an acceptable level of risk
- Reduce the lifecycle costs of owning, operating and maintaining infrastructure assets

Use Business Approaches

- Define asset requirements
- Use business case evaluations
- Incorporate risk and prioritization

COMPREHENSIVE ASSET MANAGEMENT BENEFITS

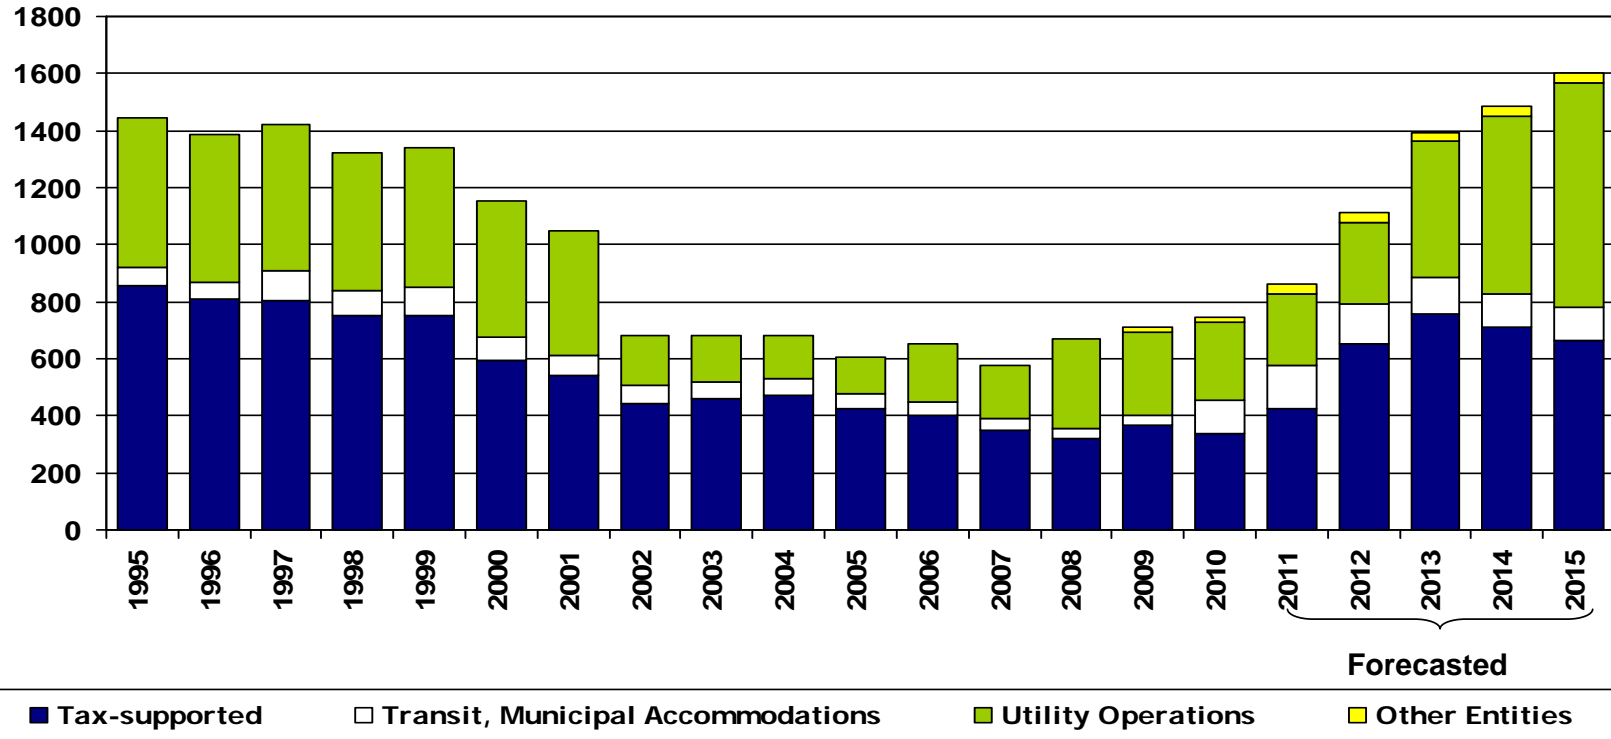

- Lower overall cost of asset ownership over time (capital and operating costs)
- Improved asset reliability and asset effective life
- Better allocation of scarce resources through risk management
- Improved coordination over the asset life cycle
- Improved asset knowledge management and use of data to drive decision making

CAPITAL FINANCING

* Includes funding for P3 payments.

CITY OF WINNIPEG NET DEBT PER CAPITA at December 31st

- Debtenture debt and P3 obligations included
- Other Entities included in 2009 and subsequent years

Council Adoption of the 2011 Capital Budget

On February 22, 2011 Council adopted the following recommendations:

1. A. That the 2011 Capital Budget totalling \$370,114,000 requiring borrowing authority of up to \$78,952,000, as tabled at the Executive Policy Committee meeting on January 21, 2011, and amended by Recommendation No. 2, be approved.
- B. That the 2012 to 2016 Five Year Capital Forecast as tabled at the Executive Policy Committee meeting on January 21, 2011, and amended by Recommendation No. 2, be approved in principle.
2. That up to \$1 million in funding be allocated each year from the \$3 million Granular Roadway Improvements project account for sub-cutting and adding gravel to unimproved gravel back-lanes in need of repair.
3. That the cash to capital contribution be as follows:

<u>Year</u>	<u>\$ Millions</u>
2011	67.478
2012	69.478
2013	71.478
2014	73.478
2015	75.478
2016	77.478

4. That all other transfers to/from reserves and other funds outlined in the Capital Budget be approved.
5. That the expenditure of \$9.409 million be authorized for the Transit Building Replacement/Refurbishment in 2011 or prior to the adoption of the 2012 Capital Budget as a first charge, in accordance with Subsection 288(2) of The City of Winnipeg Charter to allow for timely contract award and capital work.
6. That the expenditure of \$800,000 be authorized for the Assiniboine Park Conservancy – Capital Development Plan in 2011 or prior to the adoption of the 2012 Capital Budget as a first charge, in accordance with Subsection 288(2) of The City of Winnipeg Charter to allow for timely contract award and capital work.

7. That the Director of Legal Services and City Solicitor be requested to submit the necessary borrowing by-law directly to Council.
8. That the Proper Officers of the City be authorized to do all things necessary to implement the foregoing, including the execution of any documents related thereto.

The City of Winnipeg

CAPITAL PROJECTS SUMMARY

2011

Adopted Capital Budget

and

2012 to 2016

Five Year Forecast

Adopted by Council on February 22, 2011

Notes:

1. Capital budget amounts are estimates only and are subject to materials management policy (e.g. tenders, bids, and contract awards including Public Private Partnership proposals).
2. In the attached Capital Projects Listing, tax supported capital projects are financed by cash to capital unless another funding source is disclosed for the project. In addition, the Manitoba Winnipeg Infrastructure Program and Provincial funding for Road Improvements financing amounts are not all allocated to individual capital projects. These unallocated financing amounts will offset cash to capital requirements.
3. The Public Service uses the Association for the Advancement of Cost Engineering (AACE) International Classification system for capital budget estimate purposes for all non-scalable projects. Capital estimates for non-scalable projects contained in this budget document are supported by a class 4 or 5 estimate, unless specifically noted.

Other Projects.....	3-126
Transit.....	3-128
Water and Waste.....	3-133
Winnipeg Golf Services.....	3-230

Notes:

1. Capital budget amounts are estimates only and are subject to materials management policy (e.g. tenders, bids, and contract awards including Public Private Partnership proposals).
2. In the attached Capital Projects Listing, tax supported capital projects are financed by cash to capital unless another funding source is disclosed for the project. In addition, the Manitoba Winnipeg Infrastructure Program and Provincial funding for Road Improvements financing amounts are not all allocated to individual capital projects. These unallocated financing amounts will offset cash to capital requirements.
3. The Public Service uses the Association for the Advancement of Cost Engineering (AACE) International Classification system for capital budget estimate purposes for all non-scalable projects. Capital estimates for non-scalable projects contained in this budget document are supported by a class 4 or 5 estimate, unless specifically noted.

PUBLIC WORKS - GENERAL CAPITAL FUND

Project Name: **Recreational Walkways and Bike Paths - Various Locations**

Department: Public Works
Project: 183200XX11

Capital Priority Rating: 3 - 4
Service: Roadway Construction and Maintenance

AUTHORIZATION	Previous Budgets	2011 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2012	2013	2014	2015	2016		
Project Costs (\$000's)	N/A *	1,000	500	500	500	500	500	2,500	3,500

Cash to Capital	1,955	2,300	345					4,600

NET OPERATING IMPACT	2011	2012	2013
Revenue increase/(decrease)	117	138	21
Less:			
Operating expenditures increase/(decrease)	10	20	30
Debt and finance charges increase		186	405
SURPLUS/(DEFICIT)	107	(68)	(414)

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

A program whose main goal is to improve the movement of people and goods using the transportation system by improving the coordination of traffic signals along major corridors in the City.

- Increases existing system capacity by providing full monitoring capability of local controller operations.
- Provides a multi-protocol communications system that allows for the use of the existing field equipment as well as for the future procurement of different controller types from different manufacturers.
- Provides capacity for future system expansion.
- Upgrades remaining electro-mechanical signal controllers to full electronic technology.
- Minimizes on-going communications costs by using standard low speed communications circuits (both wireline and wireless) with up to 32 intersections per circuit, and maximizing the use of local intersection control equipment for both local and coordinated operations (and as a backup in the event of a communications failure).

PUBLIC WORKS - GENERAL CAPITAL FUND

Project Name: **Developer Payback - Various Locations**

Department: Public Works
Project: 180700xx11

Capital Priority Rating: 2 - 3
Service: Roadway Construction and Maintenance

AUTHORIZATION	Previous Budgets	2011 Adopted **	FORECAST					Five-Year Forecast Total	Six-Year Total
			2012 **	2013	2014	2015	2016

On March 25, 2009, Council approved the recommendations contained in the "Tuxedo Yards Redevelopment" report and directed the Public Service to enter into a Strategic Economic Agreement with the Developer for the development of 1.5 million square feet of mixed-use commercial development at the southwest and northwest quadrants of Sterling Lyon Parkway and Kenaston Boulevard. Pursuant to this Agreement, the Developer is responsible for the financing of all costs (estimated total of \$26.5 million) of off-site infrastructure and servicing, any acquisitions of land required and of relocating Manitoba Hydro services located in City right-of-ways. Further, the Developer is entitled to recover from the City \$14 million of such costs (plus interest) subject to the conditions outlined in the Strategic Economic Agreement.

The Agreement also includes provisions regarding the responsibility of the Developer for the acquisition of certain lands (to a maximum of \$450,000) and the construction and/or modification of certain railway crossings (to a maximum of \$500,000). The Agreement provides that these costs will be funded by the City of Winnipeg and deducted from the \$14 million entitled to be recovered by the Developer.

On September 14, 2009, the City of Winnipeg (City) and the Province of Manitoba (Province) entered into the "Manitoba - Winnipeg Offsite Infrastructure Funding Agreement" whereby the Province will provide \$8 million in funding, payable in equal instalments from 2010 to 2012, to the City. The City will in turn pay the Developer the equivalent amount upon receipt of payment from the Province.

Amounts budgeted from 2014 onward represent repayment to the Developer of the \$14 million City contribution plus interest and are equivalent to estimated incremental municipal realty taxes to be generated by the development.

PUBLIC WORKS - GENERAL CAPITAL FUND

This is an annual program which includes city-wide installation of:

- new traffic control signals and pedestrian corridors,
- audible pedestrian signals,
- roadside safety improvements,
- traffic calming measures,
- miscellaneous geometric improvements,
- traffic sign replacements,
- railway crossing safety improvements,
- traffic signals system enhancement program.

Funding in 2011 will allow for the completion of a number of high priority intersection geometric improvements.

On July 21, 2010 Council approved a first call on the 2011 Budget in the amount of \$111,300 for the replacement of the pedestrian corridor at Osborne and Wardlaw with a half signal.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The Regional and Local Streets program includes the renewal and reconstruction of the City's streets, sidewalks, lanes, and recreational walkways/paths. The purpose of this program is to maintain the level of service, structural integrity, and rideability of the transportation infrastructure network.

On February 22, 2011, Council approved that up to \$1 million in funding be allocated each year from the \$3 million Granular Roadway Improvements project account for sub-cutting and adding gravel to unimproved gravel back-lanes in need of repair.

See next page for program details.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The Arlington Street Overpass is nearing the end of its useable service life. Within 10 years the Overpass will have to be replaced, undergo major reconstruction or be decommissioned with enhancements to other routes. The purpose of this study is to develop a cost effective functional plan to be implemented within the 10-year time frame. The study will include transportation planning, structural evaluation, conceptual design and public consultation. Budget allocation is based on a Class 4 estimate.

Annual program to carry out preventative maintenance, major repairs, improvements, or replacement to existing bridges, subways, overpasses, culverts, and related bridge infrastructure ensuring continued and continuous services of these facilities to the maximum practical extent.

Additional funding is required in 2011 to undertake an urgent major culvert replacement complete with slope stability that is threatening Pembina Highway (Beaujoulais Coulee) near Ducharme Avenue. This work will be coordinated with Water & Waste Department to include a flood control structure. The estimated budget allocation for this work is \$1,500,000 based on a Class 4 estimate. The additional funding will allow a minimum program of bridge maintenance of the remaining bridge infrastructure. Annual program to carry out preventative maintenance, major repairs, improvements, or replacement to existing bridges, subways, overpasses, culverts, and related bridge infrastructure ensuring continued and continuous services of these facilities to the maximum practical extent.

On December 15, 2010 Council approved a first call on the 2011 Budget in the amount of \$800,000 for the Structure Rehabilitation - Portage Avenue at Truro Creek.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

In 2010, Plenary Roads Winnipeg (PRW) was awarded the contract to design, build, finance and maintain the Disraeli Bridge and Overpass Facility. The bridges will be replaced with entirely new structures that have a design life of 75 years. The project includes a separate, new Active Transportation bridge crossing the Red River.

The bridges are designed to accommodate future expansion to six lanes, should that option be pursued. A minimum of four lanes will remain open throughout construction during all peak travel times (Monday to Friday 6 am to 6 pm). Construction will commence when all regulatory approvals are obtained and the new bridges will be open to traffic in the fall of 2012.

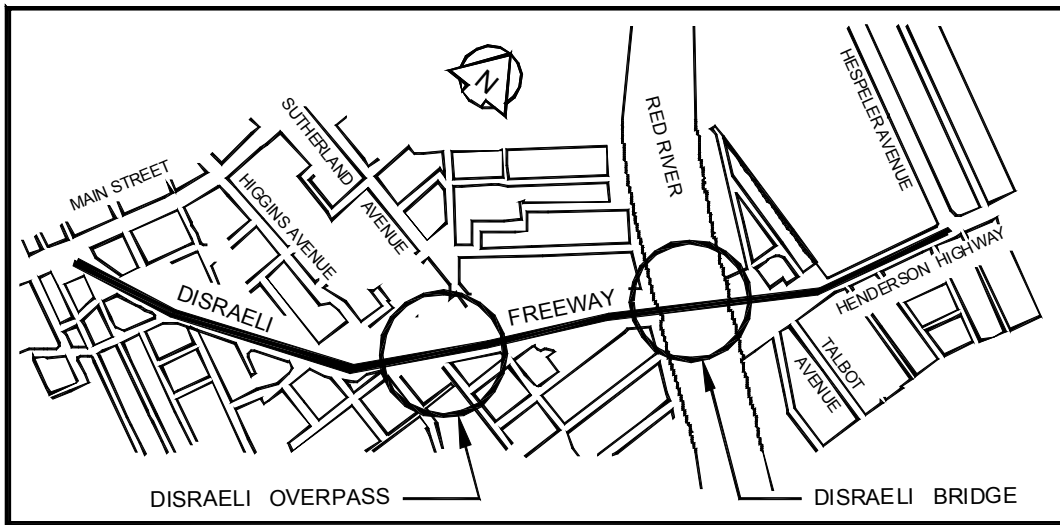

The City will make a down payment of \$75 million to PRW when the new bridges are open to traffic. After opening to traffic, the City will make monthly payments to PRW over the 30 year term of the contract to cover the remaining capital cost of the works as well as the maintenance of the facility. Payments to PRW are based on performance and payments are reduced where the City's performance specifications are not met.

The City's \$75 million commissioning payment will be financed by cash from the Encumbrance Toward Commissioning Payment with the balance being funded by debt. Both the payments to PRW and payments on the debt will be funded by Federal Gas Tax. Maximum annual payments total \$19.8 million per year for the first 10 years after commissioning, decreasing to \$14.8 million per year for the final 20 years of the maintenance term.

Council has approved a by-law authorizing up to \$75 million in external debt for this project. The Public Service will seek to minimize external debt to the extent that internal financing may be available.

This project was approved by Council on July 21, 2010.

In 2010, DBF2 Ltd. was awarded the contract to design, build, finance and maintain the Chief Peguis Trail Extension from Henderson Highway to Lagimodiere Boulevard. The project includes a grade separation at Rothesay as well as a separate new Active Transportation bridge crossing Chief Peguis Trail at Raleigh/Gateway. Construction has commenced and the facility is scheduled to be open to traffic in the fall of 2012.

The City will make \$20 million in milestone payments to DBF2 Ltd., beginning at 51% construction completion. The City will make an additional payment of \$30 million to DBF2 Ltd. when the new facility is open to traffic. After opening to traffic, the City will make monthly payments to DBF2 Ltd. over the 30 year term of the contract to cover the remaining capital cost of the works as well as maintenance of the facility. Payments to DBF2 Ltd. are based on performance and payments are reduced where the City's performance specifications are not met. Most maintenance activities are the responsibility of DBF2 Ltd., however, certain day to day operating activities have been retained by the City due to cost effectiveness.

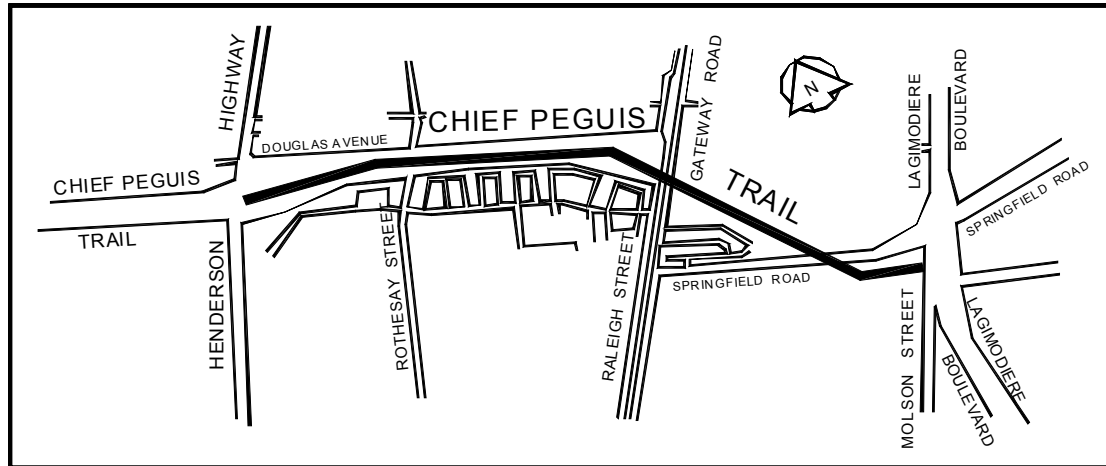

The City's \$50 million in payments to DBF2 Ltd will be financed by funding from PPP Canada Inc., the Province of Manitoba and debt. PPP Canada Inc.'s funding is based on 25% of eligible expenditures (maximum \$25 million) and as such, may vary slightly from budget. External Debt will be adjusted once PPP Canada Inc. funding has been finally determined.

PUBLIC WORKS - GENERAL CAPITAL FUND

Chief Peguis Trail (continued):

It should be noted that in the prior year's Capital Budget, \$2 million per year for 30 years was held in the Capital Investment Fund for this project. This balance was formally transferred by Council on July 21, 2010.

In a letter from the Provincial Minister of Local Government dated July 13, 2010, a total of \$9 million in 2010 Road Improvement funding has been committed for the extension of Chief Peguis Trail from Henderson Highway to Lagimodiere Boulevard. As such, this funding has been included in Previous Budgets to reflect this commitment.

On September 13, 2009, \$54.7 million was announced in joint Federal-Provincial-City funding for the Waverley West Arterial Roads Project. The investment will allow for future economic growth in this area, decrease commute times and improve safety for motorists. Funding is made available under the Building Canada Fund - Major Infrastructure component, part of Canada's Economic Action Plan.

The project includes; the intersection of Kenaston and Bishop Grandin with a partial grade separation, the extension of Kenaston as a four lane arterial roadway from Bishop Grandin to PTH 100, an at grade intersection of the proposed Kenaston and PTH 100, the addition of two new lanes on the existing Waverley and the rehabilitation of the two existing lanes to connect with the four lane arterial roadway to the north, a new four lane section of Waverley that creates a realignment of the existing street in a westerly direction to the proposed Kenaston Blvd, a new at grade intersection of the new Kenaston and the realigned Waverley Street, the decommissioning of the at grade intersection of Waverley and PTH 100, and a new 2 lane section of Waverley south of PTH 100 to the new intersection of Kenaston and PTH 100.

Funds adopted in the 2009 Capital Budget for the Kenaston Boulevard extension and Bishop Grandin intersection have been transferred to this project.

The asset management program being implemented in the Public Works Department is centered on the application of quality management principles to the operation, maintenance, and renewal of infrastructure. A primary objective is the development and implementation of methodologies to preserve the infrastructure and to identify the funding necessary for the long term preservation of the assets.

An objective of the asset management program is to extend this systematic structural quality management approach to all the infrastructure under the Public Works Department responsibility. Funds are required to implement new or maintain existing asset management programs.

Funds will be allocated to:	2011	2012	2013	2014	2015	2016	Total
Traffic Signals Branch, Transportation Division	50	100	50	50			250

The facility will be constructed in conjunction with the Public Works east yards development. It will store salt and treated sand for use in snow and ice control. Recent guidelines for the environmental management of road salt use recommends that road authorities across Canada increase protection for materials exposed to wind or precipitation in order to minimize loss of salt to the environment. Previous budget includes \$500,000 that was an authorized transfer in 2007 to the St. Anne's Road streets project.

This project will create a totally integrated Insect Control information system that includes: dispatch, inventory control, billing, tracking & reporting, larviciding and fogging. This system will enable Insect Control to more effectively coordinate their fogging and larviciding programs and use their products in a more efficient manner. The current system is comprised of disparate applications that have been created over the last 5-10 years. It is anticipated that since Insect Control is a very unique function, no "off the shelf" software will be available, therefore it will need to be custom built.

Local Improvement Capital Projects are those which are financed partly by a direct levy on the properties benefited. The program is governed by Local Improvements By-Law No. 98/72 and is subject to advertising and subsequent approval by the majority of ratepayers involved. The types of expenditure generally falling within this category are: paving of local streets and lanes; sidewalk and boulevard construction; installation of new watermains and sewers; ornamental street lighting and lane lighting.

The Community Incentive Grant Program, established by Council on March 6, 1985, was designed to encourage non-profit community recreation and sport organizations to undertake capital projects which would result in long-term benefits to the community at large in terms of improved service and facilities. On July 23, 2003, Council adopted expanded criteria for the Program.

On January 25, 2007, Council, with approval of the 2007 - 2012 five year Capital budget program, approved a 2% annual increase to the Community Incentive Grant Program. The Forecast assumes the continuation of this 2% increase each year.

Continued capital funding is required to replace aging library shelving and furniture that cannot be accommodated within the existing operating budget. The average age of Winnipeg's branch libraries is approximately 45 years old. Much of the furniture and shelving dates from the original opening of those facilities. The furniture and shelving needs to be replaced, in some cases for safety reasons, in order to ensure that library facilities remain safe, accessible and welcoming spaces for the changing needs of library users.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Project funds are necessary to replace and furnish modern, safe, and accessible libraries that are able to accommodate the changing needs of library users. Funding allocated in 2009 will be used in conjunction with 2011 funds for expenses related to the architectural design of the new library facility as part of a multi-use complex that will see the amalgamation of two existing libraries into one new facility. Construction on this amalgamation is expected to occur in 2012. The new library facility would open in early 2013. Accommodations costs, inclusive of debt and finance charges, relative to construction of the new facility in 2012, are estimated to increase based on 2009 data at approx. \$275,000. Details will be further confirmed with Municipal Accommodations during the preparation of the 2012 - 2014 budget and will be incorporated into the operating budget at that time.

Funding for 2013 - 2016 are for future library projects that could include, but are not limited to, amalgamations, joint use facilities, libraries located in multi-use recreation and leisure facilities, and stand alone library facilities either as replacements for existing facilities or net new library facilities to the City (as per Recreation Leisure & Library Facility Policy).

** Supported by Class 3 estimate, see Appendix # 2.

This capital program is required to support ongoing renovations of existing library branches that cannot be supported within the existing library operating budget. The average age of Winnipeg's branch libraries is approximately 45 years old. Improvements to facilities will include replacing carpeting, flooring, painting, energy efficient improvements such as lighting and water conservation initiatives, furnishings, counters and workstation replacements that incorporate ergonomic design and universal design principles. In addition, funding will be used for undertaking minor and major construction projects in order to improve library facilities to meet the changing needs of library users.

The 2010 renovate and refurbish funds were combined with 2008 funds to undertake major renovation projects at the Louis Riel, Henderson and Osborne Libraries. In addition smaller projects were undertaken at St. Boniface, Munroe, Cornish, Fort Garry, and Millennium.

If sufficient funds exist, in 2014, the plan is for a major renovation of one or two existing branches in partnership with the Winnipeg Library Foundation.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

This capital project will help address workplace and public safety, health, and accessibility issues that are not part of the current service level agreement with Building Services.

Each year a portion of the funds will be utilized for installation of security systems, fitness equipment replacement, and facility amenities and accessibility projects within 13 indoor pools and 9 major recreation centres based upon established priorities.

New demands require security for staff while performing their duties and increased surveillance of non-staffed space within our buildings, both for patron safety and theft prevention within and immediately outside of aquatic and recreation facilities.

The heavy use of fitness equipment and customer demands requires that a program of equipment replacement is implemented to ensure safety and meet contemporary needs.

Recreation facility amenities must be refurbished to meet public health and safety standards, regulation, and to enhance facilities to meet the needs of the public including accessibility (washrooms, change rooms, signage, public entranceways, etc.) and accessible family amenities (specialty change rooms).

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

Capital funding is required to address three areas: 1. Signage needs on the exterior and interiors of library facilities, including electronic signs, for promotion of services and programs, are required to make libraries more visible to the community. 2. Safety issues need to be addressed in many libraries including upgrading lighting, installing video monitoring technology, regular landscape maintenance, and other building upgrades are required to ensure that libraries remain safe and welcoming to the community and deter vandalism and graffiti. 3. Accessibility issues need to be addressed including adding exterior ramps, upgrading public and staff washrooms, improving wayfinding signage, and installing life safety apparatus to meet the needs of persons with disabilities.

Capital funding is required to purchase a new mobile library vehicle in order to expand library outreach services to inner city, high risk neighbourhoods. The vehicle purchased would be a walk-on vehicle that would be equipped with shelving for collections, space for programming and public access computers to provide access to information and conduct library functions. The Library Services Division will work in conjunction with Fleet Management to purchase the appropriate vehicle for this specialized service. The vehicle may be purchased from out of province because of the specialized nature of the vehicle.

Annual operating funds will be required for the mobile van service including staffing, start up collection, program supplies, three Public Access Computers, and vehicle operating costs including insurance, licensing, gas, other consumable charges, etc.

Old infrastructure - During the 1950's, 60's and 70's, the City experienced significant growth with corresponding new infrastructure being built as a result of the baby boomer generation. Much of this infrastructure is 40 to 60 years old and requires renewal.

These project funds are necessary for new infrastructure to service growth and to replace existing aging infrastructure to meet citizen demand for contemporary recreational amenities. Replacement of existing facilities may result in consolidation or closing of existing facilities to meet the requirements in the Recreation Leisure and Library Facility Policy approved by Council on May 18, 2005. The City is working towards the consolidation of facilities in all future developments with a focus on developing multi-use facilities (e.g. libraries, water amenities, fitness, skateboard parks, basketball courts, arenas).

The funds requested in 2010 and 2012 are proposed for a new multi-use facility and are required to supplement the capital funding included in the Library Replacement capital request. The total of \$3.250 million includes costs for the demolition of existing structures, design and construction of the facility, and parking lot development. Construction is expected to occur in 2012. Any net utility savings (e.g. heat, electricity, water, repairs and maintenance) that may accrue from a new building will be determined and incorporated into the 2012 - 2014 budget submission.

Funding in 2015 - 2016 are for future projects that could include joint use facilities, multi-use recreation and leisure facilities, and stand alone facilities where a business case can be made (Recreation, Leisure & Library Facility Policy).

** Supported by Class 3 estimate, see Appendix # 2.

COMMUNITY SERVICES - GENERAL CAPITAL FUND

Project funds are necessary to refurbish and redevelop existing recreation and aquatic facilities to become more modern, safe, and accessible and to accommodate the changing needs of recreation users. Funding requested in 2011 will be partially used to consult and design future year's priority projects.

Funding for 2012 - 2016 are for future recreation and aquatic projects that could include, but are not limited to, amalgamations, joint use facilities, multi-use recreation and leisure facilities, and stand alone recreation and aquatic facilities either as replacements for existing facilities or net new library facilities to the City (as per Recreation Leisure & Library Facility Policy).

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature. The first year of funding for this program is 2011.

COMMUNITY SERVICES - GENERAL CAPITAL FUND

Project Name: **Assiniboine Park Conservancy (APC) - Upgrades and Improvements**

These capital dollars represent the City's ongoing commitment to Assiniboine Park building repairs, upgrades and park improvements.

The first year of funding for this project was 2010.

The release of capital funds is subject to annual explanation and submission of projected cash flow needs to the Public Service.

As this project is a capital grant, it is exempt from the following overhead: 1% administration, 2% interest charges.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

COMMUNITY SERVICES - GENERAL CAPITAL FUND

These capital dollars represent the City's ongoing commitment to the Assiniboine Park Conservancy - Capital Development Plan which is subject to a maximum contribution of 25% of the total capital costs outlined in a Council approved Ten-Year Capital Development Plan (2010 - 2019) for Assiniboine Park. APC is required to obtain matching funds from private sector donations and senior government contributions.

Based upon a Council approved Development Plan, APC will submit on an annual basis its request for the City's contribution for the following funding year's development plan project(s). APC will include detailed information on planned projects including total costs and other funding sources.

As Development Plans are completed, or require revision as time progresses, APC will develop and present new and amended Development Plans for Council approval.

In 2010 (the first year for this capital project), \$2.849 million was provided towards the Nature Playground and Duck Pond expansion project.

As this project is a capital grant, it is exempt from the following overhead: 1% administration, 2% interest charges.

Technological changes in wireless technology, 911 issues, Voice over Internet Protocol (VoIP), deaf teletype, and data networks require replacement of outdated systems and equipment. This project represents:

1. A change from the current Winnipeg Police Service (WPS) wireless data network to a Mesh Network Solution;
2. Replacement of the existing phone system;
3. Miscellaneous upgrades related to the 911 alternate site. Legislation requires the WPS to provide an alternate communication backup site to ensure continued service should equipment fail during an emergency. Specifically, legislation requires that every Public Safety Answering Point (PSAP) service must have a facility that (a) has a risk assessment carried out in accordance with guidelines approved by the Minister; and (b) can, within one hour, be operational as a PSAP facility to the extent of 80% of the capacity of the PSAP service's primary PSAP facility.

** Supported by Class 3 estimate, see Appendix # 2.

WINNIPEG POLICE SERVICE - GENERAL CAPITAL FUND

A new Automated Fingerprint Identification System (AFIS) was installed in late 2007. Life expectancy of the equipment is approximately 5 years after which time the system hardware may become obsolete and subject to reduced and/or withdrawn maintenance support. If available, maintenance will be more costly as the system ages.

** Supported by Class 1 estimate, see Appendix # 2.

The mobile laptop technology in cruiser cars needs to be replaced every 5 to 6 years due to the obsolescence of this equipment and the harsh environment to which they are subjected. Currently there are about 200 mobile laptops in general patrol cars at a cost of \$5,000 each. Additional costs are for modem upgrades, brackets and mounting equipment used to attach the laptops to the vehicles. Ergonomically placed laptop computers are critical for prevention of back injuries to police officers.

With increasing demands for capturing information when dealing with the public, it appears that at the moment the best way to accomplish this is through an officer mobile video system. The mobile system would be attached to an officer and record all audio and video for a particular interaction. It is estimated that \$1,000,000 would be required to outfit approximately 800 officers with this equipment along with storage equipment to archive and maintain the data. It is expected that technology will progress in this area to provide better alternatives when the purchase date arrives.

On January 27, 2010, Council approved the establishment of a Winnipeg Police Service Flight Operations Unit (Helicopter) subject to approval of new incremental funding from the Province of Manitoba for all ongoing annual operating costs, estimated at \$1.3 million in 2010 plus cost increases thereafter.

Additional positions were required and have been included in the operating budget estimate noted above. The initial capital cost to purchase the helicopter, a hangar to house the unit, and all related operational equipment is estimated to be \$3.492 million.

The purchase of a Police helicopter will produce tangible and intangible benefits to the Police Service and to the citizens of Winnipeg. Benefits of acquiring a helicopter include pursuit management and related liability reduction, increased public safety, officer safety, higher clearance rates, freeing up of other 'on the ground' resources and the ability of the aerial support to serve as a 'force multiplier' (a tool that allows 1 officer to accomplish the work of many).

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The 2010 Adopted Capital Budget and 2011 to 2015 Five-Year Forecast approved by Council on December 15, 2009 included estimated budget required to procure two district stations including, potentially, property and purchasing the necessary furniture and special equipment needed at each station.

On July 18, 2007, Council approved the award of a public-private partnership (P3) contract for the development and operation of the East District Police Station based on a 30-year lease term.

The above estimates have been prepared by the Public Service based on the P3 contract for the East District Police Station. Costs include estimated procurement, furniture, and special equipment, plus construction inflation and timelines for the development of the West and North District Police Stations.

The above annual cash flow estimates represent lease payments and include technical maintenance, but not utility and other operating maintenance expenses. This capital detail sheet was prepared by Planning, Property and Development.

* Note: "Previous Budget" amount was reduced from \$56.721 million in 2010 due to a closing of prior year funding of \$2.828 million.

** Supported by Class 3 estimate, see Appendix # 2.

On November 25, 2009, Council approved the purchase of the Canada Post Building (266 Graham Avenue) at a purchase price of \$29,250,000 and that \$20,408,000 available from previously approved capital budgets relating to Public Safety Building Recladding/Police Headquarters capital projects as well as interim financing of \$9,527,000 to be provided by the City from internal cash flow from the Equity in Capital Assets Fund be used to finance the purchase.

The portion of 266 Graham Ave. known as the Winnipeg Mail Processing Plant (WMPP) is to be redeveloped for the consolidation of certain Winnipeg Police Service (WPS) operations at an estimated cost of \$105 million.

The budget for the \$105 million redevelopment includes \$20,408,000 from the Land Operating Reserve Fund, \$5,640,000 in internal financing (cash-to-capital) and \$78,952,000 in external financing.

Approval by the Chief Administrative Officer is required prior to any contract award.

This project consists of a number of improvements to and/or consolidation of various Winnipeg Police Service units' facilities. These improvements will address the operating requirements of a modern police force in a metropolitan area the size of the City of Winnipeg. Areas impacted include, the Evidence Control Unit, the Technological Crimes / Identification Unit, the Street Crime Unit, and the Central Processing Unit. These significant aspects of the Service require updated modern facilities to maximize operating processes. A number of other operating units will also be impacted by this consolidation.

** Supported by Class 3 estimate, see Appendix # 2.

This project represents the Winnipeg Fire Paramedic Service (WFPS) program for facility replacement, relocation and improvements.

To deal with an infrastructure deficit identified in 2008, the WFPS proposed a two phase approach, with Phase I identifying stations most in need of improvement. Phase I was approved in 2010 and was funded from existing capital authorizations and CMHC loans.

Phase II is provided in this set of forecasted expenditures as follows:

2013/2014

Station # 15 relocation (presently at 1083 Autumnwood Drive)

Station # 19 relocation (presently at 320 Whytefold Road)

2015/2016

Station # 13 relocation (presently at 700 Lilac Street)

New Station (Waverley West Development)

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

FIRE PARAMEDIC SERVICE - GENERAL CAPITAL FUND

The Winnipeg Fire Paramedic Service (WFPS) currently operates over 400 radios on the Fleetnet Radio Systems (FRS). The existing vendor will not support the system past 2014, and it is unknown what will replace the FRS across the Province after that. System redevelopment to support the radio system is estimated at \$6.0 million, which is to be completed in two phases in 2015/2016.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

This is an on going office automation program. Its primary goals are to deliver cost-effective solutions that provide convenient customer service to our citizens and to improve organizational efficiencies. We can achieve these goals through expansion of online services, office/workflow automation, re-engineering of legacy systems, electronic documents management, and systems integration (e.g. database synchronization) between our own applications and those of other departments.

It is anticipated that maintaining and improving a solid technological framework can provide the basis for organization improvements that increase efficiency and reliability. In order to improve service delivery, we strive to make information more accessible, streamline workflows, and reduce any duplication of efforts. It can also be argued that some initiatives such as electronic document submissions are not only citizen-friendly but environmentally responsible as well.

A general program of ongoing system improvement is suggested and is seen as reasonable to ensure the continued longevity and viability of the City's investment in office automation.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

This program supports the acquisition of riverbank lands for the City's linear parkway system and promotes the use of the City's rivers and riverbanks by facilitating public access to rivers and riverbank lands and encouraging the use of Winnipeg rivers for transportation and recreation through the provision of boat launches, docks, pathways, and other accessibility improvements.

Funds provided are for implementation according to the prioritized river segments adopted by Council as opportunities present themselves and as needs dictate. The current top six priority parkways include North Winnipeg, South Winnipeg, Kildonan, Boni-Vital, North Assiniboine, and South Assiniboine, in no particular order.

2011 Proposed Projects:

- Boni-Vital Parkway- Winnipeg Canoe Club Connection
- South Assiniboine Parkway - Gerald Lynch Park River Access & Dock Improvements
- Seine River Greenway - Shorehill to Creek Bend Road Connections
- North Assiniboine Parkway - River access project- Construction in Fall 2010/ Spring 2011
- North Winnipeg Parkway - Redwood to St. John's Park Connection

The funds are required to supplement funding being received from Veterans Affairs Canada (VAC) under a joint funding project to renovate the Brookside Cemetery. VAC have so far invested \$60k in 2007, \$120k in 2008, \$200k in 2009, \$100k in 2010 and a discussion of \$100k average for further years to complete the project; further funding is promised but not guaranteed for the next 10 years.

In addition, the Capital funds are required for the purchase and installation of columbaria and other cremation interment facilities at City cemeteries. In the past the investment in columbaria units has generated revenues in excess of 200% of the investment sum. The Transcona Cemetery needs to have installed a cremation garden that will assist in increasing revenues and also the Chapel building is decaying and becoming unsafe, so requires renovation and to include indoor columbaria to generate revenue in support of the cost of funding the building renovation.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

The Program objective is the functional and aesthetic improvements and required upgrades to public spaces and streetscapes in the Downtown and Exchange District National Heritage Site. The funds enhance accessibility, safety, comfort and urban design quality of pedestrian environments and fulfill the commitment to the "Downtown First" philosophy. The Downtown Winnipeg Urban Design Guidelines provide the guiding principles to support design and enhance the liveability of Winnipeg's Downtown Urban environment.

The program supports and develops ongoing partnership opportunities for future Public / Private development and redevelopment partnerships and projects such as: Old Market Square, Broadway, Hydro Tower, Millennium Library Park, Bonnycastle Park and the Assiniboine River walk. Projects have traditionally relied on and/or leveraged other partnership opportunities and have supported private redevelopments.

These public open space and streetscape improvements are over and above and exclusive of work assumed by the Public Works, Transit, and Water and Waste Departments who are responsible for existing infrastructure such as curbs, street and sidewalk repairs, street trees, planters, boulevards, required maintenance and accessibility standards.

Priorities in 2011-2016 include but are not limited to: Old Market Square Phase III; Manitoba Hydro Precinct; Bonnycastle Park and Assiniboine River walk; Air Canada Park; Downtown and Exchange District Pedestrian Facilities Enhancements; East Exchange including Manitoba Sports Federation Streetscaping; Broadway; and the Edmonton Street Pedestrian Corridor.

After adoption of the 2010 Capital Budget, Council approved (January 27, 2010), a new capital project "Old Market Square Redevelopment" with a total budget of \$1.25 million from the Downtown Enhancement Program, the Government of Canada, Centre Venture Development Corporation and the Winnipeg Foundation was approved and is noted in previous capital.

Council also approved (February 24, 2010) an amendment to 2009 Downtown Enhancement Capital Program Budget by transferring \$217,500 from the Planning, Property and Development Department's Non-specified Capital Account to the 2009 Downtown Enhancement program in order to complete the Waterfront Drive Public Art project. Accordingly, the Previous Budgets amount has been restated.

The Millennium Library Park has been the recipient of \$575,000 for Public Art from the Cultural Capital of Canada Public Art program. Additional phases of the Park will be funded by the Winnipeg Library Foundation fundraising efforts for a kiosk, southeast plaza, the event plaza and stage.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Project Name: **Community and Neighbourhood Main Streets (BIZ Areas, Streetscaping, Placemaking)**

Department: Planning, Property and Development

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The work focuses on the Business Improvement Zones (outside the Downtown), designated image routes and neighbourhood main streets. The funds will be utilized to initiate, partner and implement streetscape initiatives, enhance accessibility, safety, comfort and urban design quality of pedestrian environments. These enhancements are over and above and exclusive of work assumed by the Public Works Department that includes curb, street and sidewalk repairs, and the required maintenance of existing infrastructure including shrub, tree and turf replacement.

This enhancement program will continue in consultation and collaboration with the Winnipeg BIZ Association and in partnership with the private sector to achieve the goal statements of: supporting Community and Neighbourhoods Main Streets (BIZ's) and providing anchors for neighbourhoods and character districts; providing a vibrant environment for both businesses and residents to enhance the image and vitality of our neighbourhoods and our city; ensuring the renewal and sustainment of the infrastructure which creates a sense of place and destination in and along Business Improvement Zones and of Image Routes.

This enhancement program takes the form of decorative medians, pedestrian lighting, banner poles, special entry nodes, special pavement treatments, character signage, plants, trees and site furnishings.

The City of Winnipeg, through the enhancement program, will work with the proponents by having a three phase approach including: Conceptual planning and design development in Phase 1; and a two-year Phase 2 and Phase 3 for tender and construction to allow complementary and partnership funding. The program aligns to have up to three partnered projects moving forward at any given time.

2011 - St. James Village BIZ (Major Project Revitalization), West Broadway BIZ (Major Project Revitalization), Osborne Village BIZ (Concept Plan Development), Grosvenor Square Street Elements Maintenance upkeep

2012 - St. James Village BIZ (Major Project Revitalization), West Broadway BIZ (Major Project Revitalization), Osborne South BIZ (Concept Plan), Old St Vital BIZ (Concept Plan Development), BIZ Zones--Rapid Transit Stations connectivity strategy

2013 - Osborne Village BIZ (Major Project Revitalization), Norwood Grove BIZ (Concept Plan Development)

On September 24, 2003, Council approved in principle the Public Art Policy of the Mayor's Task Force on Public Art in Winnipeg and directed that the Chief Administrative Officer work in conjunction with WAC (Winnipeg Arts Council) to develop the necessary procedures for implementing the direction of the policy, including but not limited to those areas relating to governance and funding. Council adopted a Public Art Policy on October 27, 2004.

Projects underway:

- United Way/Winnipeg Arts Council Public Art Project for UW's new building
- WITH ART Projects: Eritrean Community; Dorchester House; Resource Assistance for Youth; Unitarian Church Food Bank
- Artist-in-Residence in Community Gardens and Portage Planters
- Central Park
- Osborne Bridge Rehabilitation
- Library Literary Fence
- Cultural Capital Public Art Project

Public Art Strategy (continued):

Projects implemented:

- WITH ART Projects: Immigrant and Refugee Community Organization of Manitoba; Manitoba Urban Native Housing Association; Maternity Care Action Network; Spence Neighbourhood Association; Elwick Community Centre
- Artist-in-Residence Projects: City Archives "Souvenirs"; Living Prairie Museum "lost_landscape"; St. Boniface Museum "Reliquary/Reliquaire"
- Vimy Ridge Memorial Park "Table of Contents"
- Millennium Library "Untitled" and "The Illumination"
- Downtown BIZ Bike Rack Collaboration
- Assiniboine Park Sculpture "Agassiz Ice"
- Exchange District BIZ Poster Board Collaboration
- Bishop Grandin Greenway "land/mark"
- University of Winnipeg Transit Project "City.Block.Stop"
- Maison des artistes "Monument"

The City of Winnipeg is legally obligated through the approved Development Agreement Parameters to provide payback on older Developer Agreements based on the approved 48/52% split on the development of park costs. The funding formula is that the City of Winnipeg contributes 52% to the park development costs. Additionally, these funds will cover provision of basic amenities that are more cost-effective and practical to install at the time of initial development (such as pathways, lighting, tree planting) particularly for linear park developments.

Applications from some of the outstanding (older) agreements are now being received due to the current build out.

Calculations based on industry consultation and the actual reviewed costs of works as they are completed each calendar year. Capital requirements are updated on an ongoing basis.

In 2000, the Riverbank Stability Characterization Study identified stability conditions of 106 km of City owned riverbank property which comprises approximately 45% of all such property within The City of Winnipeg. Inasmuch as costs to effectively stabilize all City owned river and creek banks requires a significant funding commitment of \$80 million (2000 dollars), "first phase" priority sites were established in the report for purposes of the City implementing stabilization along the most critical sections of riverbank. Four priority sites have been stabilized to date, namely, Annabella Street to May Street (2003), St. John's Park (2006), Bunn's Creek (2006) and St. Vital Park (2008) at a total cost of approximately \$4.0 million.

PLANNING PROPERTY AND DEVELOPMENT - GENERAL CAPITAL FUND

Riverbank Stabilization (continued):

The Planning, Property & Development Department, in collaboration with the University of Manitoba, developed a Geographic Information System (GIS) Riverbank Asset Management System which systematically updated the priority sites listing in 2009 for all City owned riverbank property based on assigned engineering attributes as follows:

Site	Amount
Red River - Churchill Park (Montague to Cockburn)	2,620,000
Red River - King's Park (Outside Bend)	2,770,000
Red River - Guay Park	1,110,000
Red River - King's Park	1,460,000
Red River - Minnetonka at River Road	430,000
Red River - River to Rivergate	1,780,000
Red River - Canoe Club	3,570,000
Red River - St. Mary's at Perimeter	3,610,000
Red River - Crescent Park	1,010,000
Red River - St. Vital Cemetery	2,100,000
Red River - Glasgow to Brandon	1,040,000
Red River - Lyndale Drive	1,650,000
Total:	<u>23,150,000</u>

The Building Communities Initiative II (BCI) is a capital expenditure program that invests in community infrastructure in Winnipeg's neighbourhoods. The program's goals are to improve living conditions in Winnipeg's neighbourhoods where capital improvements in parks, community facilities, municipal infrastructure, and crime prevention initiatives will have lasting, long-term benefits to the neighbourhood and the larger urban community.

A two Phase \$20 million "Building Communities II" Agreement between the City of Winnipeg and Province of Manitoba was executed on May 27, 2010.

Approved Capital funding to 2010 (\$9.5 million) reflects commitments to BCI II- Phase One (2010-2012) projects, including 21 approved projects and 18 endorsed projects by BCI Policy Committee as at May 25, 2010.

* Amount has been adjusted to reflect previous funding for BCI I and has been reduced \$400,000 as a result of December 16, 2008 Council Recommendation.

The existing emergency generator sets in a number of accommodations facilities are coming to the end of their useful life.

Maintenance costs are rising and there is a possibility of existing generators not functioning as intended in future power outages.

Present Building Codes require additional equipment, needed for fire and life safety purposes, to be supplied with backup power from a generator.

Mission critical operations within these facilities require backup power which exceeds the capacity of existing generator sets.

Building occupants are requesting backup power for their information technology operations which existing generator sets are not able to provide.

Security/Building Automation systems include: HVAC controls, security systems and building access and monitoring systems.

Security has been noted as an ongoing concern within all facilities. Enhanced security will reflect the evolving risk management needs to protect City staff and property from potential injury and loss and reduce legal liability. Possible upgrades may include security system improvements, system upgrades, access control and surveillance systems.

Present HVAC controls in buildings are aging and require replacement or upgrading to current standards. Up to date building HVAC controls are required for occupant comfort and contribute to reductions in energy consumption.

This program is for refurbishment and improvements of Community Centres (CC).

Projects for 2011 include the following:

Roofing / Building Envelope / Structural Upgrades: West Kildonan CC, Richmond Kings CC, Oxford Heights CC	250
Parking Lot / Site Drainage / Hard Surface Building Access Upgrades: Dakota CC, Richmond Kings CC	250
Expansion/renovation of Lindenwoods CC	410
Total	910

On April 27, 2011 Council adopted a report to consolidate \$410,000 from the 2011 Community Centre Refurbishment and Improvement program with additional funding of \$2.34 million to establish a \$2.75 million "Linden Woods Community Centre (LWCC) Gymnasium Project" budget. The additional funding consisted of \$1.15 million from the City of Winnipeg, \$961,011 from the Recreational Infrastructure Canada (RINC) program and \$228,989 from LWCC.

The City Auditor presented the Public Works Asset Management Audit - Part 2 Facilities Maintenance in June 2006. The Audit made a number of recommendations relative to the development of an asset management/work management program and linking to other division/corporate programs. This funding provides for the ongoing program of building assessment/inspection to ensure building condition data is current, and ongoing improvements to the division's work management program.

On June 29, 2005, Council approved \$43 million for recreation and leisure facilities. The City's Recreation and Leisure Facilities Policy was adopted on May 18, 2005. The timelines for projects were finalized each year through the capital budget process considering priorities, project readiness, and financial/operational capacity.

Funds are allocated to the Community Centre Investment Fund as well as administration and overhead charges.

This \$2 million grant represents a contribution by the City of Winnipeg toward the cost of an indoor soccer field to be included in a new recreation facility located at the University of Winnipeg.

The new recreation facility is to be constructed alongside Spence Street between the Duckworth Centre and the new bus loop near Portage Avenue (Spence Street Promenade).

As this project is a Capital grant it is exempt from the 1% administration overhead charge. The 2% short-term interest charge is also not applicable as the funding source is other than cash-to-capital.

The City Clerk's Department has a corporate responsibility for records management services and archives as outlined in the City of Winnipeg Charter. To date, temporary record storage has taken place at 380 William Avenue. The facility is now at maximum capacity, forcing departments to utilize private records storage centers. Departments are bound by by-law to keep records for a specific period of time.

In order to provide a more centralized and more cost effective records management storage services, the City Clerk's Department will renovate a portion of a city owned warehouse at 311 Ross Avenue to accommodate records storage. The area will remain a warehouse but requires some repairs to floors and walls, upgraded lighting and security, and installation of shelving. The records center opened in August of 2007.

Ongoing upgrades are expected at the 5-year mark to meet anticipated demand for corporate records. These will include a review with departments on practices, procedures and charge backs. Expansion of storage capabilities will be undertaken, especially in the area of oversized and specialty records.

** Supported by Class 1 estimate, see Appendix # 2.

In accordance with the Department's statutory responsibility to compile a List of Electors and convene elections, every four years the Department ensures the renewal of equipment and systems used in Election processes.

As some of the systems are only used every 4 years, they require either extensive renovations or complete rewrites to allow them to function with changed systems, networks and databases. In the past, this has involved corporate mainframes and a large number of staff hours. For the 2010 Election the City Clerk's Department ensured systems were operational using in-house resources and contract personnel, and by purchasing ready made systems from election partners such as our voting machine partner Election Systems and Software and our voters list partners Elections Canada and Elections Manitoba.

Systems which will need to be upgraded / revitalized for the 2014 Election include the List of Electors system, GIS mapping systems, election night reporting systems and web sites, especially those utilizing the Internet for more effective communication with candidates, media and the public.

A similar effort will be required for the 2018 election.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The City Archives, located at 380 William Avenue, was opened as the City's first library in the early 20th century. The building currently serves as a repository for storage of the City's historical information and has done so since 1977. The structure was designated a heritage building in 1984. Protected elements include the front rooms on the first and second floors, the building exterior and the iron fence surrounding the property.

The building until recently acted as the City's record centre. Deflection of second floor beams and a potential for collapse have resulted in much of the records storage / weight being removed from the second floor of the building and transferred to 311 Ross. A consultant's report has identified several issues with the building including the need to address the load bearing capacity of the second floor, ensuring appropriate repairs to the Tyndall Stone facade, ensure adequate waterproofing for the roof and foundation, as well repair / replacement of windows. Also identified are a lack of fire suppression systems and lack of wheelchair ramps in the building. These issues will be addressed over a series of years based on priority with the final year of funding being 2015.

The most pressing immediate need is repair of the iron fence surrounding the property. Due to the historic designation of the property and the fence, the fence needs to be rebuilt in the same manner as existing, rather than simply be removed or rebuilt in wood.

** Supported by Class 3 estimate, see Appendix # 2.

This grant of \$100,000 is to be provided to the Manitoba Children's Museum to support their capital renewal project.

Project plans for renewal include:

- a new Welcome Centre, providing upgraded admission amenities, as well as providing needed safety and security for the youngest visitors and serving as a gathering place;
- 12 innovative, creative, multi-level galleries in an holistic environment, offering open-ended play and discovery opportunities;
- a fully dedicated toddler area to meet the needs of our youngest and most treasured adventurers; and
- a multi-functional Arts and Exhibition Centre for travelling exhibits, special events, performances and rentals along with three educational classrooms for programs and workshops.

As this is a capital grant, it is exempt from the following overheads, 1% administration and 2% interest charges.

** Supported by Class 1 estimate, see Appendix # 2.

This grant of \$50,000 is to be provided to Le Cercle Molière to support the construction of a new 19,000 square foot theatre facility.

The new theatre will be designed for small audiences of up to 125 people. With maximum flexibility in mind, non-fixed seating and platforms will be designed to allow unorthodox stage configurations as required by each production. State-of-the-art acoustic, lighting and sound systems will provide the infrastructure for a new era of exploration and artistic excellence.

As this is a capital grant, it is exempt from the following overheads, 1% administration and 2% interest charges.

** Supported by Class 1 estimate, see Appendix # 2.

Capital funding is required for a business review, development and implementation of a Consolidated Time and Labour Model for the City of Winnipeg. The review will identify opportunities for improvement of current systems, identify applications that can be consolidated and improve operating processes and procedures. Recommendations and project implementation will provide system improvements, increase economy, efficiency and effectiveness related to the recording and reporting of time and labour through centralization of this function.

The ability to accurately and consistently report data from many applications is becoming increasingly important. The Data Warehouse/ Business Intelligence initiative will provide the base from which many application systems and their data can be brought together to provide reporting capability as the City moves toward a more service based view of its operation.

Included in this program is a project to build a single repository of data to enable the City's systems to link with the Provincial system for the sharing of common Business Identification Numbers. This starts the process of consolidating all business data in the city, resulting in cost-savings and efficiencies. The initiative to a common Business Identification Number satisfies the Red Tape Commission's recommendation number 6.1 - Standardized Business numbers.

Communications Network Infrastructure is the implementation and enhancement of the backbone network infrastructure which connects the decentralized computers in Civic Departments. This is a high speed infrastructure to enable the sharing and distribution of corporate information across departments with more management, control, flexibility, and ease of use at the department level. Information could be processed and stored on lower cost computers in or for departments and made accessible city-wide through the network infrastructure. The infrastructure would extend the availability of applications such as e-mail and internet to all departments.

Network Computing Initiatives are emerging multi-tiered infrastructure, internet/intranet servers and other similar network based computing technologies that are required to implement both corporate and departmental initiatives in support of shared quality customer information services. Specific initiatives include hardware, software, and physical facilities protecting the City's networks and key systems from single site disasters, security products to address the ever growing computer virus and "spam" outbreaks, and re-organization assistance to efficiently manage new environment paradigms.

E-Government supports projects that use information technology to support the provision of e-government services. It covers a broad spectrum of initiatives that typically fall into two main categories: 1. Providing better service to citizens (i.e. 24 X 7, self-service options); and 2. Providing services more efficiently and effectively, translates into productivity gains and reduced costs. These funds will be used to provide applications to improve the City's Internet site and to provide better and new electronic services to citizens. In addition, the funds will be used to purchase software to support the development of citizen self-service applications on the web. This software includes content management software, portal software, and single sign-on and authentication software.

As noted in Recommendation #10 of the Report on Redesigning the City of Winnipeg's Internal Services accepted by the Senior Management Team July 14th, 2010, the City is planning to move forward with a standard tool to record and manage its information technology assets. Capital expenditures that provide long lasting benefit to the City would include software, hardware, conversion effort from existing multi-source systems, and a temporary secondment or consulting efforts.

The City's implementation of a Computer Work Management System for the Communication Systems Branch by leveraging the City's existing investment in Maximo, will provide a more efficient and accurate tool to help manage the complex inventory of telecommunication components and work orders from various city departments including Winnipeg Police Service.

** Supported by class 3 estimate, see Appendix # 2.

The Assessment Automation project generally includes initiatives focused on improving the efficiency and the effectiveness of the assessment and taxation functions through the appropriate use of automation. Funding in 2012 is to complete the NeoCAMA project for the upgrade of our core valuation system (CAMA or Computer-Aided Mass Appraisal). The CAMA system is used to capture and maintain detailed sales, financial, and physical characteristic information about all properties and businesses in the City of Winnipeg. The information is used to calculate fair and equitable assessed values for all properties and businesses. These assessed values are then used to calculate the yearly municipal, school and business taxes, as well as tax adjustments throughout the year.

The funding in 2015-16 is for further system upgrades and rehabilitation to the Manta system and other key assessment and taxation systems including electronic document and record management, quality systems, acquisition of property images including high resolution aerial images, and integration of PADView with other key applications. The Manta system includes the tax billing information and accounts receivable for all properties in the City of Winnipeg. This system is integral to the annual tax billing process and is used in all taxation processes including realty and business tax billings, accounts receivable, Tax Instalment Payment Plan, Local Improvements, Tax Sale, and customer service. The Manta program is now eleven years old in 2010. It is prudent to budget funding in future years to review the sustainability of the current system and prepare for replacement/rehabilitation.

The existing fare collection system is many decades old and limits flexibility in the type of fares that can be offered to passengers. A review has been conducted on the best options suited for the City's public transit system. This capital project will authorize capital investments that may include replacing existing fareboxes with automatic validating electronic fareboxes equipped with integrated electronic fare card readers. This type of farebox would collect, secure, reliably count and report all fare payments. The electronic fare card reader will allow more extensive use of prepaid fares and provide a better defense against potential counterfeiting of passes, tickets and the misuse of transfers.

Estimated useful life - Twenty years.

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Transit's operations are housed out of two primary facilities, the Fort Rouge complex and the North Main garage. These facilities are approximately 40 and 80 years old respectively and are operating at close to their effective capacities. A study of the Transit's facility requirements completed in 2009 indicates that these existing facilities will not support the fleet and operations necessary to meet increasing service demands in the near and long term. The department funds the maintenance of its facilities through the operating budget. However, many of the structural, mechanical and electrical systems in the existing facilities are past their design and economic lives and significant capital funding is required to bring the facilities up to acceptable standards.

This multi-year capital project will address both the issues of refurbishing and/or replacing the existing facilities to address age and condition issues and adding and/or expanding facilities to meet space requirements in the near and long term. In addition to garage facilities, this may include consolidation of off-site operational groups to the campus through the renovation of existing space or the construction and/or procurement of new areas.

Estimated useful life - Dependent on the specific projects approved.

The asset management program in the Transit department is part of the city-wide initiative to improve how assets are managed. Specific initiatives will involve defining our asset level of service, asset business processes, and a risk and prioritization framework. The funding provides for the initial consulting costs of the project as well as the initial purchase of an asset management information system.

WATER AND WASTE - GENERAL CAPITAL FUND

This is an annual program of carrying out repairs or improvements to shorelines and facilities of existing stormwater retention basins including, but not limited to, rock revetment, gate chambers and piping, fountains, and maintenance equipment launching ramps. Rehabilitation and/or upgrading of the retention basins will reduce annual maintenance problems and improve safety.

There are currently 93 stormwater retention basins under the City's jurisdiction. At the current level of funding and depending on the level of work required, 2 to 4 basins are rehabilitated every two years. As the basins age, they will require a higher level of maintenance, and thus future funding levels and prioritization of work will have to be reviewed in order to continue this program of asset preservation.

The expected life of this asset is 25 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - GENERAL CAPITAL FUND

In a 2007 report on the adequacy and operation of the 34 regional flood pumping stations, it is estimated that \$22.7 million in upgrades will be required. Near-term expenditures (i.e., next 10 years) have been estimated at \$14.5 million, and long term (next 11-50 years) are identified to cost \$8.2 million. These upgrades improve overall station reliability during high river levels and rainfall events. Funding for this project also includes an annual program for carrying out major repairs, upgrades and/or improvements to the flood pumping stations, and associated outfall pipes and gates. Upgrades and/or improvements include changes to: ventilation, electrical, mechanical, structural, and architectural components. All stations will be upgraded for remote monitoring which is critical during flood and rainfall events.

Formerly, under the 1990 "Clean and Beautiful Winnipeg" initiative, several flood pumping stations had been identified for aesthetic improvements.

The expected life of this asset is 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - GENERAL CAPITAL FUND

This is a project to install flap gates and positive sliding gates within concrete gate structures on outfall sewers where these facilities do not currently exist or the existing facilities are inadequate or substandard. Under high river level (flood) conditions, the river water backs up into the land drainage and combined sewer systems. In some low lying areas there is a potential for river water to inundate roadways and adjacent properties. The presence of river water in the sewer also greatly reduces the capacity of the system during a rainfall or snow melt event. Subsequent to the 1997 flood event, 70 outfall locations were identified as requiring gates.

To date 39 locations have been addressed, leaving 31 locations yet to be completed.

The expected life of this asset is 50 years.

WATER AND WASTE - GENERAL CAPITAL FUND

This project will investigate and implement programs, policies and legislation to:

- 1) Protect and ensure permanency of current and future secondary dike installation;
- 2) Prevent construction of new structures interfering with secondary dikes and within unprotected areas subjected to frequent high river levels;
- 3) Purchase and remove existing structures from the floodplain; and
- 4) Investigate a process and develop guidelines to control or prevent improvements/re-developments at unprotected private properties with potential acquisition of such high risk properties starting in 2007.

In April 2007, Council approved a program to raise the level of flood protection for low-lying properties below 20 ft James Avenue where it could be demonstrated the cost of providing sandbags exceeded the cost of a permanent flood works. In this program, the level of flood protection would be raised to 22.5 ft James Avenue and thereby avoid the need to sandbag for most floods. If all eligible properties participate, the cost of this program could be \$880,000 and the City could avoid the sandbagging cost of approximately \$2,000,000. Up until July 2010, 14 properties have been flood protected under this program.

The implementation of such programs could take place over a minimum of 5 to 10 years at a cost of \$10 million.

The purchase of Seine River Waterway lands is a Council adopted policy to provide long term economical regional drainage and to manage the floodplain. The floodplain lands were originally delineated in 1980 and are required to accommodate flow along the Seine River from a 100-year summer storm. They are typically purchased at the time of subdivision, made possible from funds collected through the Seine River Waterway Charge applied to all subdivision and rezoning applications within the Seine River watershed within City limits. Development of lands adjacent to the Seine River will occur faster than the development of lands further from the Seine River. Therefore, the funding required to purchase floodplain lands will exceed the funding collected from the Waterway Charge.

The 1997 flood identified that in the south-end of the City the primary dikes were too low due to higher flows on the upstream portion of the Red River, and in the north-end of the City the dikes were too low due to backwater effects from the Floodway. In 1997 these deficiencies were addressed by constructing temporary clay dikes. The current level of proposed funding will begin to address these areas.

To provide 1 in 700 year flood protection, the level proposed with the Floodway Expansion will require a further raise of the City's primary dike system to deal with additional backwater effects from the expanded Floodway. The estimated cost to undertake this additional work is in the range of \$400 million (2009 dollars) and represents the cost for raises to the primary dikes and associated bank stability improvements. The recently released Clean Environment Commission (CEC) report on the Floodway Expansion made a "non-licensing" recommendation that the City complete permanent raising of their primary dikes by 2015 and that all levels of government work cooperatively on the financing of these improvements.

There are a number of major drains that flow through the primary dike system. In 1997, Baldry Creek (Fort Richmond) and Beaujolais Coulee (St Norbert) had to be coffer dammed off to isolate these systems from the Red River. Water and Waste Department has been working with Public Works on a culvert replacement project on the Beaujolais Coulee on Pembina Hwy which would involve adding a gate chamber to their project. The gate chamber and fixed tractor-driven pumps are estimated to cost \$3.2 million. This work would be scheduled to be done in 2012.

Until permanent works are completed, the City will rely on temporary raises to its primary dikes on an as-required basis.

Asset management principles are being utilized for various sections in the Water and Waste Department. An asset management strategy is required to define goals, objectives, and strategies for the development and maintenance of a consistent and effective asset management program involving all functions of the land drainage service. The asset management strategy will identify, prioritize, and establish the future direction of condition assessments, establish deterioration/life cycles for components, and recommend rehabilitation, maintenance, and associated financial requirements.

During high water events, the City places temporary pumps to dewater the sewer system during rainfall/snowmelt events. These temporary pumps require continuous monitoring during a high water event.

This program will involve replacing some of the temporary pump locations that need to be placed every year with permanent submersible pumps. Costs include modifications to site, pumps and cost of providing appropriate power at site.

The expected life of the assets is 50 years.

The City of Winnipeg's Geographic Information System based Flood Manual was developed in the 2000 to 2003 timeframe and has proven invaluable in fighting a number of floods since then. The upper bound of the Flood Manual calculations is a water level comparable to 1997 flood or 24.5 ft James Avenue. Based on the current Floodway Operating Rules, levels in the City could exceed 24.5 ft James Avenue for floods slightly larger than a 1 in 100 year flood.

Preliminary analysis indicates that the Flood Manual should be extended to calculate flood activities up to 27.0 ft James Avenue. The City will consult with the Manitoba Water Stewardship on an appropriate upper bound. The second upgrade is to upgrade the old VB6 software that runs the Flood Manual. This needs to be done as VB6 software is no longer supported.

The City currently has continuous water level monitoring from 8 gauges on the Red and Assiniboine Rivers. During flood or significant rainfall events surveyors are sent out to monitor water levels at other key river sites and on critical stormwater retention basins throughout the City.

Installation of a monitoring system allows for monitoring of water levels during a flood event and post-event assessments of the performance of the lake sites. A total of 14 sites have been identified. The first phase of the program is to develop installation concepts and cost estimates for each of the sites, and the second phase will be installation of gauges based on overall priority.

Funding is for rehabilitation of sewer outfalls, repair to piping, and correction of riverbank instability. A condition assessment was completed in 1998 to provide a prioritization of repairs for outfalls throughout the City. Outfall repairs will focus on the outfalls that require most immediate attention, some of which experienced damage from the high river elevations and ice flows experienced during the 1996 and 1997 floods. Originally 55 high-priority sites were identified requiring attention. Since then, 5 more sites have been added for a total of 60 sites.

The expected life of this asset is 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

This program, which was approved by Council on October 21, 1987, provides for basement flood relief to combined sewer areas. Funds will be used for the planning, design, and construction of sewer relief works. Also, a portion of the funds will be used for sewer flow and meteorological monitoring in advance of design as well as public communication and education on basement flood protection.

There are 42 combined sewer districts in Winnipeg. Currently, 28 combined sewer districts have been relieved. At present, 2 combined sewer districts are being relieved, another 2 are being considered for partial separation and an additional district will be studied for future relief. Planning for the relief work is also coordinated with the upcoming Combined Sewer Overflow program and the Sewer Rehabilitation program. The cost for the remainder of the program is \$246 million and at current funding rates will require over 20 years to complete. The benefit to cost ratio of the outstanding work is 3.8 to 1; meaning for every dollar spent on sewer relief works, \$3.8 dollars are saved in reduced flood damages.

The expected life of this asset is over 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - GENERAL CAPITAL FUND

Basement flooding has become an issue in some separate sewer areas as in combined sewer areas. A parallel relief sewer program in separate areas is necessary. Prior to any works proceeding, a planning study will be undertaken to identify City-wide priorities, as well as allow for sewer flow and meteorological monitoring in advance of a conceptual and detailed design.

The expected life of this asset is over 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

The provision for development agreement payback is an allowance for the City to repay developers who bridge finance the installation of oversized land drainage services at a time when City capital funding is not provided. The policy guideline for bridge financing was defined in the previous version of the Development Agreement Parameters and was again incorporated in the most recent version of the Parameters which was adopted by Council on June 21, 1989.

Funds budgeted will provide the following paybacks:

2012 DASZ 30/05 - Bridgewood Estates Inc./Perfanick	500,000
2013 DASZ 10/10 - North Grassie Properties/Starlight Village	500,000
2014 DASZ 1/06 - MHRC/Waverley West	500,000
2015 DASZ 14/94 - Genstar/Prairie Crossing	500,000
2016 DASZ 56/85 - Inksbrook Industrial Park	500,000

The expected life of this asset is over 50 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - GENERAL CAPITAL FUND

Project Name: **Fernbank Avenue Land Drainage Sewer**

Department: Water and Waste
 Project: 20820001yy

Capital Priority Rating: 3 - 3
 Service: Land Drainage and Flood Control

This project includes construction of a 1,350 mm diameter land drainage sewer on Fernbank Avenue from approximately 65 metres west of Main Street to Rivergrove Drive. The sewer will provide a permanent outlet for the Riverbend Subdivision retention basin and an outlet for the undeveloped lands west of the CPR Winnipeg Beach Subdivision rail line. These lands include the Public Works Department's snow dump site north of Fernbank Avenue. The expected life of this asset is 75 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Saskatchewan Avenue Watermain**

Department: Water and Waste -
Waterworks System

Urban development of the lands within the City and west of the Perimeter Highway (PTH 101) will require an extension of the water distribution system to provide a looped supply. The funds included are to provide for a watermain between Cavalier Drive and a point 500 metres west of PTH 101 on Saskatchewan Avenue. It is expected that watermains required within the development lands to complete the loop will be oversized by developers. The expected life of this asset is over 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Water Supervisory Control and Data Acquisition (SCADA) Upgrade**

The Supervisory Control and Data Acquisition (SCADA) system controls and monitors the operation of the Drinking Water Treatment Plant and the Regional Water Supply and Distribution System. The automated control system is comprised of specialized computer hardware and software, remote communications, instrumentation, and Programmable Logic Controls (PLC). A SCADA system assessment and upgrading are required to ensure timely replacement of dated hardware and software. The SCADA system is essential for the supply, water treatment process control and distribution of drinking water.

The PLCs currently in use at the three regional pumping stations (McPhillips, MacLean, and Hurst), Tache and Deacon Booster Pumping Stations, and Shoal Lake Intake were installed in 1992 and will no longer be serviced or supported by the manufacturer as of December 31, 2011. Upgrading the water supply system's PLCs at this time will allow for the review of the control software to optimize the operation of the system.

Concurrent with the PLC replacement, the controller logic language will be updated along with additional electrical upgrades to enhance operational reliability.

The expected life of this asset is 10 years but will depend on the technical advancement in the process automation field.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Shoal Lake Intake Chloramination Facility**

Department: Water and Waste - Capital Priority Rating: 5 - 4
 Waterworks System

Project: 20120003yy Service: Water

AUTHORIZATION	Previous Budgets	2011 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total

The first phase of the project will be a study to review alternate forms of treatment and/or disinfection for the Shoal Lake Aqueduct and distribution system to meet the operational, public health, and safety goals. Presently, chlorine is used at the intake for disinfection, slime control in the aqueduct and zebra mussel control. This results in high levels of disinfection by-products being formed. The water treatment plant must be operational prior to replacing the strong disinfection advantages of chlorine. The Water Treatment Project Risk Management process identified viable alternatives to gas chlorine to reduce risk. Given the consequences associated with security, transportation, and containment of gas chlorine, an alternative form of chlorination will be investigated.

The expected life of this asset is 25 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Many components in the water supply and distribution systems have been in service for many years and are reaching the end of their functional lives. These components are critical elements of the infrastructure and their failure would result in disruption of service and costly emergency repairs. This project will address the need to rehabilitate the water supply and distribution systems, in order to maintain the water system reliability and conformance with current building codes and health regulations. This will be an on-going project with additional funding being included in future years.

The scope of work will be varied and will be prioritized based on the urgency and cost effectiveness identified through condition assessment studies, available rehabilitation techniques, and research into innovative rehabilitation measures. Infrastructure to be assessed and rehabilitated under this project includes, but is not limited to, reservoirs, pumping stations, feeder mains, valves, electrical and mechanical systems, control systems, chemical systems, related building structures, and security.

Life expectancy will vary with each asset, however, a range of 10 to 50 years is expected.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Waverley West Feedermain**

Asset management principles are being utilized for various projects in the water utility. However, development of an asset management strategy is required to define goals, objectives, and strategies for the development and maintenance of a consistent and effective asset management program involving all functions of the water utility. The asset management strategy will identify, prioritize, and establish the future direction of condition assessments, establish deterioration/life cycles for components, and recommend rehabilitation, maintenance, and associated financial requirements.

The water supply valves are critical elements used to control the distribution of water from the source through the feeder main pipes. The scope of the work will vary with site-specific conditions. This program will include installation of valves and piping at new or existing locations to improve service reliability and reduce environmental risk. The program will also include replacement of valves, operators, Supervisory Control and Data Acquisition (SCADA) control equipment, related pipe connections, valve chambers, structural assessments, and restoration works. This is an ongoing program with additional funding being included in future years.

Life expectancy will vary between 20 and 50 years.

There are structural defects noted on the precast concrete panels at the Hurst Pumping Station. Noted defects include deterioration of the copings (exposing reinforcing steel), cracked panels, deterioration of ribs on the panels, and the deterioration of the caulking joints in several locations. These conditions may lead to water penetration into the building envelope. A structural review of these conditions is required to determine rehabilitation or replacement costs. The capital budget established in 2006 has been canceled and re-budgeted for 2010 and 2011.

The expected life of the asset is 50 years.

The Deacon Chemical Feed Building contains chemical storage and injection equipment to treat the City's drinking water with fluoride and orthophosphate. Prior to upgrading the orthophosphate treatment equipment, an engineering study will be performed to review the need for orthophosphate and alternate chemicals to orthophosphate taking into consideration the enhanced water quality from the new drinking water treatment plant. Given the corrosive nature of such chemicals, the chemical pumps, piping, and related monitoring and control equipment will require upgrading and replacement by 2011.

Prior to upgrading the fluoride feed system an engineering study will be carried out to assess the flexibility of the fluoride feed system to meet future target dose rates.

The expected life of this asset is 20 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The McPhillips, Hurst, and MacLean pumping stations provide the final pumping to deliver water to the Water Utility customers. The pump stations were constructed in the early 1960's. It is anticipated that the building structures will require upgrading to ensure the uninterrupted operation of these pumping facilities. A preliminary assessment will be conducted in 2012 with future funding requirements to be identified in the report.

The expected life of these assets is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Wilkes Reservoir "B" Pit Upgrades/Rehabilitation**

The Wilkes Reservoir "B" Pit, constructed in the early 1960's, is one of two critical inlet control structures for controlling the flow of water into the Wilkes Reservoir. The "B" pit improvement works will address the employee safety requirements, egress requirements, valve replacement, structural/foundation repairs, electrical upgrades, and improve the site/groundwater drainage.

The project name has changed from Safety Upgrades - Wilkes Reservoir "B" Pit to Wilkes Reservoir "B" Pit Upgrades/Rehabilitation to align with the scope of work required.

The expected life of this asset is 50 years.

The electrical power supply is the primary source of energy to drive the pumps in the drinking water pump stations. Electrical power disruptions have caused the electric pumps to shut down, for protection purposes, which results in reduced water service. A Water Pumping Station Power Reliability Study was completed and recommended a number of electrical and control improvements to reduce the effects of electrical power disruptions. The recommended improvements will be completed in phases according to priority.

The expected life of this asset is 20 years.

The waterworks system is made up of complex infrastructure that delivers water from Shoal Lake to Winnipeg homes and businesses. Operating the waterworks system is subject to legislation including the Drinking Water Safety Act, Public Health Act, Operator Certification Regulations, Workplace Safety and Health Act, and Environment Act. Safeguarding our infrastructure from accidental or intentional damage or destruction is critical to drinking water quality and public health. Funding is required for increased security measures to adequately protect the waterworks system.

A drinking water system Infrastructure Assessment study is required under the Provincial Drinking Water Safety Act. The objective of the report is to carry out an onsite evaluation to identify, analyze, and mitigate any potential adverse health risks and environmental impacts associated with the water system in a "source to tap" methodology. This work will also determine whether the water system's source, facilities, equipment, and operations are effective in producing safe drinking water, and meet the regulations in force.

Infrastructure assessment reports are required on a 5-year reporting frequency.

** Supported by Class 3 estimate, see Appendix # 2.

The Shoal Lake Aqueduct, which has been in continuous service since 1919, delivers water to Winnipeg from Shoal Lake, a distance of 156 kilometres (97 miles). A comprehensive condition and rehabilitation of the Aqueduct commenced in 1988 and was substantially completed in 2004. While the Aqueduct rehabilitation project has resulted in an increase of the Aqueduct's service life by 50 years, ongoing monitoring and inspection programs will identify future works.

Works which have been identified include the rehabilitation of drainage siphons crossing the Aqueduct, replacement of corroded boathouse access doors and broken Aqueduct vent pipes, re-establishment of a boathouse in proximity of the Whitemouth River and condition inspection and cleaning of the Aqueduct underdrain.

During the rehabilitation of the Aqueduct, an inventory of specialized and costly inspection and maintenance equipment was assembled which will continue to be utilized in the ongoing inspection and maintenance of the Aqueduct. This equipment requires a dedicated and secure storage facility to ensure its functionality and availability.

The expected life of this asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The Greater Winnipeg Water District (GWWD) rail line crosses the Shoal Lake Aqueduct at the Deacon Reservoir site. A buried timber bridging structure was constructed, as part of the original construction work, to protect the aqueduct from the rail traffic loading. An engineering assessment of the bridging structure and aqueduct have been performed and recommended that the bridging structure be replaced as the current structure has failed and no longer offers the required protection to the aqueduct.

The expected life of this asset is 50 years.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

SURPLUS/(DEFICIT)	-	-	-

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The Deacon Reservoir cells were constructed of clay material between 1972 and 1996 and rise approximately six metres above the natural prairie. The cells have a total storage volume of 8,400 megalitres which is sufficient to supply the City of Winnipeg with water for 28 days. The cells are used to supplement the water supply when the daily water demand exceeds the capacity of the Shoal Lake Aqueduct. The cells also provide a water supply to the City when the Shoal Lake Aqueduct is annually shut down for inspection and maintenance.

There are two precast concrete box culvert pipes that cross under PTH 207 which convey water from Cell No. 2 into Cell No. 1. The box culvert joints have a history of leaking and a number of joint repair methods have been undertaken in the past with minimal success. The joint leakage is a safety issue during the winter months as the water will flood the ditches and roadway. Also this leakage over a long period of time could compromise the stability of the cell dikes in proximity of the box culvert pipes. Both box culvert pipes will be repaired by installing a structural liner.

On top of the cell dikes exists a three metre wide road which is used for inspection, maintenance, water sampling and security purposes. The total length of the cell roads is 9.5 kilometres. Over time the roads have developed a number of localized failures from water accumulation which requires repair before the roads become impassable and the cell dikes start to soften thereby increasing the risk for a catastrophic dike failure. The road rehabilitation will include excavation, recompaction of the clay dike, regrading the dike crown and placement of road gravel.

There is a significant growth of vegetation (shrubs and trees) growing on the top of the cell dikes between the edge of the road and the granite rip-rap protecting the inner slopes of the cell dikes. There is also some growth within the rip-rap. A similar growth was removed approximately 15 years ago. The removal of the vegetation is required because the roots could compromise the dike integrity and the foliage will interfere with the security system monitoring cameras and its decay will cause water quality issues. Removal of the vegetation will be labour intensive because of its proximity to the water and the rip-rap.

The expected life of this asset is 50 years.

** Supported by Class 3 estimate, see Appendix # 2.

As part of a risk management assessment, the Deacon Booster Pumping Station foundation drainage system was identified as high risk due to internal flooding from excessive foundation water. The pump floor is approximately nine meters below grade. With the construction of the new water treatment plant, the Deacon Booster Pumping Station must be operated continuously to deliver drinking water to the City of Winnipeg. The foundation drainage improvement and potential automation of valves to control the flow of water will reduce the risk of flooding the electrical pumps.

The expected life of this asset is over 50 years.

** Supported by Class 3 estimate, see Appendix # 2.

The Water Works By-law No. 504/73 relates to the Water Works Utility, the fixing of water rates and the billing and collection thereof. This by-law was originally passed by Council November 7, 1973. Each year amendments are passed to reflect the new water and sewer rates. The structure and language in the by-law has become dated. Amendments have occurred to clarify terms, liability or cross connection control provisions based on the original by-law structure. The Water Works By-law will be written taking into account a review of the by-laws in other jurisdictions, plain language format and better alignment with current operation policies.

The expected life of this asset is 25 years.

** Supported by Class 3 estimate, see Appendix #2.

The Environmental Standards Division Laboratory is an ISO accredited (for analytical and calibration laboratories, ISO 17025) laboratory located at the North End Water Pollution Control Centre (NEWPCC). The existing laboratory space is insufficient with the addition of new staff to conduct laboratory work for the new water treatment plant and the additional wastewater systems. There is a storage room at the NEWPCC of approximately 49 m² (530 ft²) that is available to be upgraded/converted to laboratory space.

The upgrade of this space includes a new heating, ventilating and air conditioning (HVAC) system to control air quality, new workstations and bench space and a new sample reception/preparation area. The cost identified also includes removal of the old duct work and other existing devices, upgrade to existing plumbing and new installation of new laboratory fume hoods, odour control canopies and incubators.

The expected life for this facility is approximately 20 years.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by Class 3 estimate, see Appendix # 2.

The Tache Booster Pumping Station on the Branch 1 Aqueduct was constructed in 1950 in order to develop the full capacity of the aqueduct. A study identified a number of required upgrading to the pumping station and the aqueduct surge tower adjacent to the station. The work includes replacing the pump motors, upgrading the station electrical, heating and ventilation systems, upgrading the foundation and roof structures, and a reconfiguration of the valving and piping between the pumping station and the surge tower. Also, aesthetic, fencing and landscaping upgrades to the site and facilities will be undertaken to coincide and assimilate with the proposed residential redevelopment of the surround area.

The capital budget established in 2006 has been cancelled and re-budgeted for 2012 to 2014.

The expected life of this rehabilitation asset is 50 years.

The water treatment research and process optimization facility will be constructed to facilitate ongoing water treatment research and optimization of the existing water treatment process. This will be a small scale model replicating the water treatment process.

As new chemicals become available or existing chemicals become unavailable or existing chemical prices rise such that they become cost prohibitive; alternative chemicals can be pilot tested in this facility to ensure the water quality will meet the regulatory license requirements. In the future as drinking water quality regulations become more stringent new water treatment processes can be studied and validated on the water supply prior to committing to a large capital expansion to the water treatment plant. Other benefits are: filter media and absorption evaluations, operator training and education, and testing of emerging treatment technologies that become cost effective. The water treatment plant has space dedicated for this facility.

The expected life of this asset is 25 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Branch Aqueduct Condition Assessment and Rehabilitation**

Department: Water and Waste - Capital Priority Rating: 3 - 2

The Branch I, II and Interconnection aqueducts are specialized pipes which are unique in size, materials, construction techniques and failure.

The Branch I aqueduct was installed in 1918 and has an established inspection and maintenance program, however, the Branch II and interconnection aqueducts were installed between 1959 and 1963 and will require specialized inspection, testing, and maintenance to preserve the asset.

The expected life of this asset is 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The Water Services Division has a strategic goal to become certified under an ISO or similar certification program to enhance customer service and manage risk. Additional benefits of becoming certified are: improved cost effectiveness, environmental compliance, reduced hazard liabilities and promotion of best management practices. The Utility has the opportunity to demonstrate to their customers a commitment to environmentally safe processes, regulatory compliance, and environmental stewardship.

The expected life of this asset is 20 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The drinking water treatment plant is the single source of treated water for the City of Winnipeg. The water treatment processes are made up of pumps, valves, piping, custom designed mechanical components, compressors, blowers, chemical handling and metering equipment, electronic measurement and control equipment, switch gears, variable speed drives, transformers and related equipment. Due to the corrosive properties of the chemicals and acids, the mechanical equipment will have to be rebuilt or replaced to ensure the provision of treated water for the City of Winnipeg.

The expected life of this asset is 5 to 20 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Ultraviolet Light Disinfection Upgrade/Rehabilitation**

Department: Water and Waste - Capital Priority Rating: 5 - 4

Project: 20025004yy

Service: Water

AUTHORIZATION	Previous Budgets	2011 Adopted	FORECAST					Five-Year Forecast Total	Six-Year Total
			2012	2013	2014	2015	2016

The ultraviolet light disinfection system is an integral pathogen barrier in the drinking water treatment process. The process treats the water by emitting ultraviolet light into the water. There is a significant amount of rejection heat generated by the electrical and mechanical systems which degrade the equipment. Typically the ballasts, transformers, bulbs, quartz sleeves and mechanical wiper systems all must be serviced and replaced at regular intervals to maintain the reliable operation of this treatment system.

The expected life of this asset is 5 to 20 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Several issues related to the failure of residential water service lines within City right-of-ways have been identified. The issues identified include the freezing of water services during extreme cold weather, the premature failure of polybutylene water services and the failure of older lead water services resulting in the temporary loss of water service to the customer.

The program will include the review and replacement of problem water services.

The expected life of this asset is 75 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

There are three public drinking water outlets in the City providing truck filling services for contractors or homeowners hauling water. Funds are required to perform an assessment of water sales, a review of the public water outlet locations, safety upgrades, and rehabilitation or decommissioning works. In some locations structural and mechanical repairs are required to maintain this service. Future funds may be required following the recommendations of the study.

Life expectancy will vary between 20 and 50 years.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Customer Information and Services System (CISS) - Interfaces, Payment Processing and Optimizations**

The Customer Information and Services System (CISS) - Interfaces, Payment Processing and Optimizations project includes implementing functionality of the Oracle Customer Care and Billing (CCB) system. Some components include upgrading the cashiering system to interface with a new payment processing system and capturing image and documentation of customer bill payments. The enhanced CCB will provide the avenue for increased customer service regarding bill and payment opportunities and functionality.

The project will prepare CCB for interfacing to the other primary department systems, such as Geographic Information System (GIS), so that an integral view of customer, work and asset information is available for better decision making. This will provide for more efficient routing for meter reading and maintenance, work routes for field crews and customer notification on water and sewer issues.

The CISS Project included \$10 million (split between the Waterworks System Fund and the Sewage Disposal System Fund) for replacing the legacy mainframe system with the new web based CCB system. In order to mitigate risk and ensure a successful project, only the base system functionality was first implemented.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

The project includes two segments: (1) 2011 - The development of a Business Case that will drive the selection and implementation plans for the metering technology, and (2) the completion of a 12-month testing period (2012-2013) followed by an assessment period. The business case will identify costs associated with water meters with encoder registers, meter interface units (radio frequency devices that communicate meter information to data collector units), data collector units, meter data management system (hardware/software) and meter installation service. Full system implementation is planned over a minimum of a three year period (2014 - 2016). Costs for advanced metering technology are estimated to be up to \$75 million.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

Project Name: **Customer Service Upgrade to Telephony Communications System**

Department: Water and Waste - Capital Priority Rating: 3 - 3

Project: 20100005yy

An upgrade is required to the telephony system used for the Water Bill Inquiry Line (986-2455), which was originally purchased in 1997. This upgrade will provide enhanced functionality for the Water Bill Inquiry Line, including skills-based routing, enhanced reporting and statistics, scheduling optimization, and enhanced monitoring, recording and coaching capacity. It will ensure that the Water and Waste Department can more effectively use its resources to provide quality customer service in a more reliable environment.

The Department plans to upgrade to the same system currently being used by the 311 Contact Centre and the Handi-Transit Contact Centre to optimize resources, as 24/7 system support has already been established within the organization, and a training and back-up facility is already located at 510 Main Street. Although the new system will be more robust and effective, it is expected that annual operating expenses will remain the same as those currently being incurred.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by Class 1 estimate, see Appendix # 2.

WATER AND WASTE - WATERWORKS SYSTEM FUND

This project is a continuing program to replace and/or rehabilitate deteriorating watermain infrastructure. Funding is used for watermain replacement, cathodic protection, valve and hydrant replacement/rehabilitation, correction of dead end mains, upgrading of substandard mains, watermain studies, assessments, and hydraulic improvements for fire protection purposes. Additional funding has been added to the program due to the escalation in construction costs and an increase in the number of watermains requiring replacement/rehabilitation. The expected remaining life of each rehabilitated watermain ranges from 20 to 80 years, depending on the rehabilitation technology and the asset condition.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

This project involves locating and identifying sources of extraneous inflow and infiltration (I&I) entering the wastewater sewer system, and implementing mitigative measures to reduce the I&I such that wet weather flows to wastewater treatment plants are minimized, basement flood protection is improved during high river levels and emergency discharges are minimized.

Extraneous inflows from groundwater, snowmelt, and rainfall events place an additional stress on the wastewater treatment plants that can result in reduced life expectancy of equipment and/or accelerate the need for wastewater treatment plant expansion. Minimizing extraneous inflows will reduce these additional stresses, prolong equipment life, and postpone facility expansion. Areas of the City will also be identified where land drainage sewer system cross-connections may exist with the wastewater sewer system that can be significant sources of I&I under high river levels or wet weather.

In addition to this, as of 1990, new homes are required to have sump pumps and pits to collect foundation drainage and then discharge this clean water onto the home owners land. The intent was to remove this large source of extraneous flow from reaching the wastewater treatment plants. It has been found, however, that some home owners have illegally connected sump pumps to their wastewater sewer service. Areas where large sources of extraneous I&I are suspected will be investigated. Appropriate technical measures including public education and communication will be initiated to rectify this situation.

The expected life of this asset is 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Sewer System Isolation in Areas Protected by Secondary Dikes**

Department: Water and Waste -

Capital Priority Rating: 3 - 3

This project involves isolating the sewer system in areas protected by secondary dikes from the remainder of the sewer system behind the primary dikes. This will involve one of three types of work for different locations:

1. Installation of gate valves on the house sewer connection;
2. Installation of sump pits and pumps and backwater valves in each property; or,
3. Installation of parallel sewer mains in streets.

The purpose of installing these works is to prevent complete flooding of a sewer district behind a primary dike should a secondary dike breach occur and flood the properties between the secondary and primary dikes.

The expected life of this asset is 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Raw Sewage Pump Replacement - North End Water Pollution Control Centre (NEWPCC)**

Department: Water and Waste -
Sewage Disposal
Project: 2031xx10yy

Capital Priority Rating: 5 - 3

Service: Wastewater

AUTHORIZATION	Previous Budgets	2011 Adopted **	FORECAST					Five-Year Forecast Total	Six-Year Total
			2012	2013	2014	2015	2016		
Project Costs (\$000's)	6,150	5,450	-	-	9,300	-	-	9,300	14,750

SURPLUS/(DEFICIT)	-	-	-

Note: *Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges*

Raw sewage pumping is an essential operation at the NEWPCC. The largest and oldest raw sewage pumps at the NEWPCC (pumps labeled as MP2, MP3, MP4 and MP6) were installed in 1965 and are each rated at 700 horsepower with a pumping capacity of 188 megalitres per day (ML/d). While these pumps have been maintained in good condition, repairs are becoming more difficult to complete. Parts are difficult to obtain and may have to be custom fabricated. The variable speed drives on pumps MP2 and MP4 are considered obsolete. Variable speed drives allow for more efficient pumping to pace the flows received at the NEWPCC.

Funding through to 2011 will be for: conceptual design pertaining to replacement of all six raw sewage pumps; functional and detailed design, contract administration, and additional services pertaining to immediate replacement of pumps MP4 and MP5; and a supply and installation contract for two variable speed pump/motor/drive assemblies and associated equipment and services for pumps MP4 and MP5.

Funding in 2014 will be for engineering and supply and delivery contracts for pumps MP2, MP3 and MP6.

The scope and cost for these upgrades will be reviewed and updated as engineering proceeds through the design and implementation phases.

The expected life of the pumps is 25 years. The expected life of the HVAC and Electrical systems is 15 years.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Upgrading External Power Supply - North End Water Pollution Control Centre (NEWPCC)**

The NEWPCC currently has two separate electrical power supply lines which are both capable of powering the entire NEWPCC facility. In the event of a power failure to one supply, the plant will continue to operate on the other supply.

When any additional treatment processes are added to the plant, this redundant power supply will not be capable of powering the plant independently due to the increase power load demands.

The biological nutrient reduction processes must be implemented by December 2014 and will increase the plant power requirement beyond the current capacity of either of the two supplies. In anticipation of nutrient removal at the NEWPCC the existing power supplies must be assessed and upgraded. The estimated cost of this upgrade is \$10,000,000.

The NEWPCC also requires stand-by power generation to keep critical plant processes such as controls, ventilation and partial treatment operating during power interruptions. Funding has been added to 2016 for this installation.

The life expectancy of this asset is 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Hauled Liquid Waste Acceptance Facility - Wastewater Pollution Control Centres**

Department: Water and Waste -
Sewage Disposal
Project: 20340009yy

Capital Priority Rating: 5 - 3

Service: Wastewater

AUTHORIZATION	Previous Budgets	2011 Adopted **	FORECAST					Five-Year Forecast Total	Six-Year Total

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

The West End Water Pollution Control Centre (WEWPCC) accepted waste from septic haulers as a disposal facility at the Perimeter Road Pumping Station. The design consultants for the WEWPCC Biological Nutrient Removal facility have recommended that this practice be stopped. On December 1, 2005, the Standing Policy Committee on Infrastructure Renewal and Public Works concurred with the recommendation. As of July 1, 2007, septage was no longer accepted at the WEWPCC and the septage receiving facility at the WEWPCC was closed. This project is to provide increased capacity at the other two facilities (North and South End Water Pollution Control Centres).

The name of this project has been revised from Septage Acceptance Facility - Wastewater Pollution Control Centres to Hauled Liquid Waste Acceptance Facility - Wastewater Pollution Control Centres. The funding in 2008 and 2009 will be used to design and construct upgraded hauled liquid waste acceptance facilities at the North End Water Pollution Control Centres and include provisions for landfill leachate acceptance at the NEWPCC. Construction of this part of the project commenced in 2010.

Due to timing of design, tendering, construction and increased budget costs, the tendering and construction of the South End Water Pollution Control Centre Hauled Liquid Waste Facility is anticipated to start in 2011.

To improve truck entry and exit security within the NEWPCC it is proposed to add an additional receiving/handling facility to the NEWPCC Hauled Liquid Waste Acceptance Facility in 2012 that will receive sludge from SEWPCC and WEWPCC. This facility will then maintain all truck traffic outside the secure fenced perimeter of the NEWPCC.

The expected life of the structures is 50 years, the expected life of electrical and mechanical components is 25 years, and the expected life for computer related systems is 10 years.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Re-Roofing at Water Pollution Control Centres**

Department: Water and Waste -

Capital Priority Rating: 5 - 2

Various Water Pollution Control Centre buildings require re-roofing because the existing roofing has exceeded their functional life and are in need of frequent repair and servicing. Mechanical equipment and controls contained in these facilities require that the superstructures be adequately maintained to protect its components. Re-roofing in a timely and proactive manner will maximize the functional life of the facilities, protect the mechanical and control components contained in the facilities, and prevent structural damage to the facilities as a result of water leakage undergoing freeze-thaw cycles. The funding for this ongoing program includes engineering, design, and re-roofing construction.

The expected life of this asset is 30 years.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The centrifuge units de-water digested sludge produced as a residual of wastewater treatment processes. Sludge residuals from the South End and the West End Water Pollution Control Centres is processed at NEWPCC. There are 6 units that are subject to intense mechanical wear, have been in operation since 1990, and are failing with increasing frequency. For construction, operation, and maintenance reasons, these units must be identical to each other, and as such must be purchased over 2 years at maximum.

The life expectancy of this asset is 15 years.

This project is for the rehabilitation and/or replacement of forcemain river crossings and for the installation of leak detection equipment on the existing waterway crossings.

The Department has completed a risk assessment of all river crossings in order to determine a prioritization plan to upgrade and replace any at risk river crossings as required by Environmental Licences issued by the Province of Manitoba for the wastewater collection system in the City of Winnipeg.

These funds will also be used to install continuous leak detection monitoring equipment at all river crossings as required by the Provincial Environmental License. The Department is currently undertaking a pilot program to evaluate and determine methods to meet this requirement.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

A risk and criticality assessment of the City's three water pollution control centres has been undertaken. The assessment outline required improvements to the existing systems to increase their reliability. The program will address the improvements which affect mechanical, electrical, and structural components at all three water pollution control centres.

The expected life of the structure upgrades is 50 years and the expected life of the electrical and mechanical components is 25 years.

The wastewater system is made up of complex infrastructure of sewers and pumping stations that convey sewage from Winnipeg homes and businesses to one of three wastewater treatment plants.

Operating the wastewater system is subject to legislation including City By-Laws, the Public Health Act, Operator Certification Regulations, Workplace Safety and Health Act and the Environment Act.

Safeguarding our infrastructure from accidental or intentional damage or destruction is critical to protecting public health and safety, preserving the environment and ensuring economic stability.

Funding is required for increased security measures to adequately protect the wastewater system.

The scope and cost of these security measures are preliminary at this time and will be reviewed and updated through the audit (expected completion by the end of 2010), design and implementation phases.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Traffic Safety Upgrades - North End Water Pollution Control Centre (NEWPCC)**

Department: Water and Waste -

The 1990 dewatering expansion at NEWPCC considered the need for traffic lights on Main Street at the exit due to the increase in large truck traffic and the safety concerns associated therewith, but this did not proceed at that time. Since then, large truck traffic at NEWPCC has increased over time from 20 - 25 large trucks/day to upwards of 100-150, with considerable increases in large leachate and liquid sludge trucks, construction trucks, as well as septage trucks and delivery/staff and contractor vehicles associated with plant expansions which are currently underway (in addition to the 100 large trucks/day). Meanwhile, the Chief Peguis bridge and surrounding developments have resulted in large increases in vehicular traffic on Main Street.

Over time, construction traffic will be replaced and exceeded by more septage trucks due to the closing of a West End receiving facility, by chemical delivery trucks due to treatment processes under construction, and by sludge trucks due to expansions at the City's other plants now underway. A traffic expert consultant assignment is urgently required to assess and develop alternatives and consult with authorities and obtain any needed approvals, followed by construction works (traffic lights, ramps, roadways, R/R crossings, access, etc.) to alleviate traffic safety issues both with on-site traffic and ingress/egress at Main Street.

The expected life of this asset is over 50 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The four original digesters at the NEWPCC, built in the mid 1930's, are now used as digested sludge holding tanks, and are essential to the operation of the digested sludge dewatering facility, which serves all three of the City's wastewater treatment plants. The interior concrete walls are subject to corrosive gases and the interior wall and ceiling have deteriorated to the point where reinforcing steel is exposed in some areas. Assessment by qualified experts has been carried out. The recommended rehabilitation includes surface preparation, application of a sealant and/or coating and installation of anodes to assure continued functionality of these tanks and avoid the expense of complete rebuilding.

The expected life of this asset is over 50 years.

** Supported by Class 3 estimate, see Appendix # 2.

The three uncovered primary clarifiers at the NEWPCC have been identified as one of the remaining untreated odour sources at the site. The original Primary Clarifier Cover project, first introduced into the 1992 Capital Budget Estimates forecast was set up to implement a cover/ventilation system which would facilitate year round maintenance and operational flexibility and provide odour control capability. The project scope of work and the budget were expanded to include replacement of the clarifier sweep mechanisms which was completed in early 2010.

The work now required on the NEWPCC Clarifiers is composed of the design and installation of clarifier covers and their ancillary equipment. The budget originally established for work required for the Clarifier Covers was developed in 2003. Recent construction cost increases averaging 15% per year, a better understanding of the required work and changes to the National Building Code have resulted in a new estimated cost of \$25,500,000.

The expected life of this asset is over 50 years.

Asset management principles are being utilized for various projects in the wastewater utility. Development of an asset management strategy is required to define goals, objectives and strategies for the development and maintenance of a consistent and effective asset management program involving all functions of the wastewater utility. The asset management strategy will identify, prioritize and establish the future direction of condition assessments, establish deterioration / life cycles for components, and recommend rehabilitation, maintenance, and associated financial requirements.

The expected life of this asset is over 50 years.

Note: *Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges*

The discharge chamber and related appurtenances were part of a major plant expansion in 1963. Due to age, wear, and the corrosive environment, extensive deterioration of this asset is evident. Funding in 2009 was for an engineering assessment on the condition and capacity of the discharge chamber and the conduit from the discharge chamber to the grit building. Funding in 2013 and 2014 will be for the design and construction of a second discharge chamber and will be dependent on the outcome of the condition assessment.

Estimates for rehabilitation of these chambers are preliminary at this time and will be revised as engineering assessment proceeds.

The expected life of the structure is 50 years and the expected life of the mechanical and electrical components is 25 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **New Surgewell - North End Water Pollution Control Centre (NEWPCC)**

Department: Water and Waste - Capital Priority Rating: 5 - 3

Project: 20310009yy

The surgewell and related appurtenances were part of the original plant construction in 1936. Due to age, wear, and the corrosive environment, extensive deterioration of this asset is evident. In addition to constructing a new surgewell, consideration will be given to upgrading the on-site interceptors and pump suction header system to improve control of raw sewage inflows and provide redundancy for the plant inflow systems.

The expected life of the structure is 50 years and the expected life of the mechanical and electrical components is 25 years.

Funds included are for the engineering and construction of a new grit collection and handling system in the Grit Removal building at the NEWPCC. Phase 1 of this project involved tank geometry and air flow system upgrades in 2008. Phases 2 and 3 will include supply and installation of a grit collection, removal and classification systems into the four grit tanks, and Phase 4 will include the replacement of the grit conveyor system.

The expected life of the structure is 50 years and the expected life of the electrical and mechanical components is 25 years.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The existing Cockburn combined sewer lift station is at its operating capacity. The proposed Bus Rapid Transit (BRT) and Fort Rouge Yards (FRY) Development will result in additional dry and wet weather flows to this station. To safely convey all dry weather flows to the wastewater treatment plants without risk of dry weather overflows, and maintaining sufficient wet weather flow capacity to protect against basement flooding, the station will require significant structural, mechanical and electrical upgrades.

The expected life of the structure is 50 years, and 25 years for the electrical and mechanical components.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The Environmental Standards Division Laboratory is an ISO accredited (for analytical and calibration laboratories, ISO 17025) laboratory located at the North End Water Pollution Control Centre (NEWPCC). The existing laboratory space is insufficient with the addition of new staff to conduct laboratory work for the new water treatment plant and the additional wastewater systems. There is a storage room at the NEWPCC of approximately 49 m² (530 ft²) that is available to be upgraded/converted to laboratory space.

The upgrade of this space includes a new heating, ventilating and air conditioning (HVAC) system to control air quality, new workstations and bench space and a new sample reception/preparation area. The cost identified also includes removal of the old duct work and other existing devices, upgrade to existing plumbing and new installation of new laboratory fume hoods, odour control canopies and incubators.

The expected life for this facility is approximately 20 years.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by Class 3 estimate, see Appendix # 2.

The Customer Information and Services System (CISS) - Interfaces, Payment Processing and Optimizations project includes implementing functionality of the Oracle Customer Care and Billing (CCB) system. Some components include upgrading the cashiering system to interface with a new payment processing system and capturing image and documentation of customer bill payments. The enhanced CCB will provide the avenue for increased customer service regarding bill and payment opportunities and functionality.

The project will prepare CCB for interfacing to the other primary department systems, such as Geographic Information System (GIS), so that an integral view of customer, work and asset information is available for better decision making. This will provide for more efficient routing for meter reading and maintenance, work routes for field crews and customer notification on water and sewer issues.

The CISS Project included \$10 million (split between the Waterworks System Fund and the Sewage Disposal System Fund) for replacing the legacy mainframe system with the new web based CCB system. In order to mitigate risk and ensure a successful project, only the base system functionality was first implemented.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The NEWPCC has six anaerobic digesters, five of which are required for sludge treatment at maximum flows. In November 2009, Digester #11 suffered a process upset which resulted in damage to the roof structure and process equipment. The project scope will be defined in upcoming months and will include engineering analysis, roof repairs, piping system upgrades and process upgrades.

Upgrades to the remaining digesters will be implemented as quickly as possible to protect them from possible foaming problems to ensure their safe and reliable operation. Estimates are very preliminary at this time and will be refined as engineering assessments and designs proceed.

The life expectancy of the structure is 50 years. The life expectancy of the electrical and mechanical components is 20 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The Water and Waste Department's three Water Pollution Control Centres (WPCC) utilize an ABB Infi90 Distributed Control System (DCS) with an ABB Process Control View (PCV) Human Machine Interface (HMI). It is an intricate network of specialized computers that monitor thousands of sensors throughout the plants and controls the treatment processes by making calculations and adjustments prescribed by operators and process control analysts using the HMI. This hardware was purchased between 1998 and 2003.

PCV is an older software package that runs on an operating system which gives rise to significant hardware compatibility issues in the event of replacement of existing computers. Newer computers require newer software drivers, which are not available in the current versions of the software that the Department owns. It is therefore not feasible to simply replace the existing computers as new computers will not be compatible with the existing software.

The purpose of this project is to implement immediate upgrades to the WPCCs' DCS and HMI systems to ensure that they remain operational and viable.

The expected life of this asset is 15 years.

** Supported by Class 3 estimate, see Appendix # 2.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The Water and Waste Department has identified organizational changes that will support the future expanded operations of both water and wastewater operations. The changes include transferring responsibility for local sewer services from the Water Services Division to the Wastewater Services Division which has been done.

Currently, the local water and sewer staff remain located in the same building. There may be significant efficiencies in amalgamating local sewer and regional sewer staff into one location and the establishment of mechanical, electrical and civil maintenance capability.

To identify the business case for this a facilities study will have to be undertaken. The recommendations from the study will then be implemented.

The life expectancy of this asset is 30 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

The Wastewater Services garage building requires various building upgrades to the superstructure as the existing building has exceeded its functional life and is in need of repairs and servicing which may include improvements to the heating and ventilation system, electrical upgrades, insulation upgrades, etc. Equipment and materials contained in these facilities require that the superstructures be adequately maintained to protect its components.

Building upgrades in a timely and proactive manner will maximize the functional life of the facilities, protect the equipment and materials contained in the facilities, and prevent structural damage to the facilities as a result of water leakage undergoing freeze-thaw cycles. The funding for this program includes engineering, design, and re-roofing construction.

The expected life of this asset is 30 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Project Name: **Customer Service Upgrade to Telephony Communications System**

Department: Water and Waste - Capital Priority Rating: 3 - 3

Project: Sewage Disposal
20400005yy

An upgrade is required to the telephony system used for the Water Bill Inquiry Line (986-2455), which was originally purchased in 1997. This upgrade will provide enhanced functionality for the Water Bill Inquiry Line, including skills-based routing, enhanced reporting and statistics, scheduling optimization, and enhanced monitoring, recording and coaching capacity. It will ensure that the Water and Waste Department can more effectively use its resources to provide quality customer service in a more reliable environment.

The Department plans to upgrade to the same system currently being used by the 311 Contact Centre and the Handi-Transit Contact Centre to optimize resources, as 24/7 system support has already been established within the organization, and a training and back-up facility is already located at 510 Main Street. Although the new system will be more robust and effective, it is expected that annual operating expenses will remain the same as those currently being incurred.

The funding for this project is split 50/50 between the Waterworks System Fund and the Sewage Disposal System Fund.

** Supported by Class 1 estimate, see Appendix # 2.

The ten circular secondary clarifiers at the NEWPCC were constructed in 1963. Over the years the concrete launders, aluminum weir plates and the clarifier mechanism guide plates have required periodical maintenance to keep them functioning. At this time the concrete and metal parts of these components require more substantial repairs. This project will require an engineering assessment to establish the work program followed by a three-year repair program.

The expected life is 50 years.

Upon completion of the 2003 regulatory hearings of the Clean Environment Commission (CEC), it has been recommended and the Province has adopted that further regulatory reviews be undertaken in two (2) years and then every three (3) years thereafter.

Ongoing works to satisfy regulatory requirements will require documentation, monitoring, and support to demonstrate that the successful implementation of projects relating to the CEC recommendations, required as a condition of tripartite funding, are meeting compliance conditions.

Budgeted funds are for environmental assessment related studies/reports, public participation, regulatory liaison, site-specific assessments, monitoring and analysis, and future representation at hearings expected to the 2015 horizon.

It is the intent to create a multi-year combined sewer mitigation program that integrates with other major sewer programs, including:

- Basement flooding relief
- Sewer Condition Assessment and Condition Upgrading
- Pollution Control Centre Upgrading Programs

A Combined Sewer Overflow Master Implementation Plan will develop specific strategies for implementation that meet regulatory compliance. The plan will consider: 2003 CEC Hearings recommendations; Manitoba Conservation Guidance and Priorities; Canadian Council of Ministers on the Environment (CCME) Municipal Effluent Strategy Guidelines; consistency with prevailing international practice; understanding of benefits and costs; fiscal responsibility and environmental stewardship; initiation of near-term actions to reduce CSO's; and confirmation of long-range control program.

The Clean Environment Commission (CEC) has recommended that the City reduce the number of overflows to the local rivers within a 20 to 25 year timeframe.

Funds budgeted are for the development of a CSO Master Implementation plan, technical and economic analyses, program development, staging of mitigation works, annual monitoring programs, pilot studies, land acquisition, integration with other major sewer programs, overflow monitoring and reporting, and initiation and implementation of control measures, including SCADA (Supervisory Control and Data Acquisition).

As more CSO's are diverted to the wastewater treatment plants, additional treatment will need to be added to process the wet weather flows to meet effluent limits set in Environment Act Licences issued for each plant.

The expected life of the sewers is 50 years, mechanical components is 25 years and SCADA system is 10 years.

The City of Winnipeg has reviewed its land application practices of biosolids relative to regulation requirements, emerging requirements associated with nutrient management regulations, changes to quantity and quality from upgraded wastewater treatment plants, and risk and criticality assessments done at all three plants. The City will have to implement an alternate biosolids management program as a result of the Provincial Nutrient Management Regulation.

The current WINGRO management program will need to be modified to satisfy the Regulation and will require significant capital investment and transition time to implement the required changes. A recently completed Biosolids Master Plan Study identified potential options, costs and timeframes to implement a new biosolids management program to comply with the Nutrient Management Regulations. Funds included are for engineering design and construction of an alternative to the existing WINGRO program.

The City of Winnipeg will be implementing an alternative project delivery method for the Nutrient Removal/Expansion project for the SEWPCC and NEWPCC, as well as an alternative Biosolids Management Program. As such, the Capital Budget needs and cash flow may need to be altered in the future, depending on how the projects are delivered.

The expected life of the facility is 50 years and the expected life of the mechanical components is 25 years.

WATER AND WASTE - SEWAGE DISPOSAL SYSTEM FUND

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

Upon completion of the 2003 Clean Environment Commission Regulatory Hearings regarding the review of the wastewater treatment plants, it was learned that nutrient control for all three Pollution Control Centres is a high priority for the Province of Manitoba. The main concerns relate to excess nutrients (nitrogen (N) and phosphorus (P)) introduced to Lake Winnipeg contributing to undesirable blooms of blue-green algae.

Environment Act Licences have been issued for all three plants requiring a final effluent with total P and N concentrations of about 1 mg/L and 15 mg/L, respectively. The upgrade requirements for ammonia and/or nutrient reduction at the wastewater treatment plants must be considered jointly. The implementation of a nutrient removal (NR) process will require a major plant expansion and double the size of the current facility. Due to the timing and magnitude of the costs, a portion of the project will need to be debt financed if it is to be implemented within the next ten years.

The impact of changes in sludge quantity and quality resulting from a NR process upgrades will have a large impact on solids handling and land applications. The addition of wet weather treatment processes associated with combined sewer overflow (CSO) control must be considered in the overall NR process design and operation effluent disinfection for wet weather.

The required funding is based on meeting expected effluent limits on a rolling 30 day average basis. These limits are contained in an Environment Act License issued for this facility. Funding is being requested to allow for completion of the plant expansion by December 2014. Additional funds may be required and will be identified in succeeding years capital budgets.

The current funding requirement is based on planning level assessments and are subject to a great deal of uncertainty. These funding requirements will be updated as engineering progresses.

The City of Winnipeg will be implementing an alternative project delivery method for the Nutrient Removal/Expansion project for the SEWPCC and NEWPCC, as well as an alternative Biosolids Management Program. As such, the Capital Budget needs and cash flow may need to be altered in the future, depending on how the projects are delivered.

The expected life of the structures is 50 years, the expected life of electrical and mechanical components is 25 years, and the expected life for computer related systems is 10 years.

This project is a continuing program to replace and/or rehabilitate sewer infrastructure. Funds will be utilized to rehabilitate or replace combined, separate wastewater and land drainage sewers. Sewers will be replaced or rehabilitated using appropriate technologies, based on condition assessment determined through video inspection. A portion of the funding will be used for condition assessment. Additional funding has been added to the program due to the increased number of sewer mains requiring replacement/rehabilitation. The expected remaining life of each rehabilitated sewer ranges from 20 to 100 years, depending on the rehabilitation technology and the asset condition.

* N/A - No amounts have been included in the "Previous Budgets" due to this project's on-going nature.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

Project Name: **Summit Landfill Closure / Post-Closure**

Note: Net Operating Impact = Revenue - Operating expenditures - Debt and finance charges

In compliance with the closure/post closure plan for the former Summit Road landfill site, there is a requirement to apply additional final cover over the site and to carry out final grading, drainage control, and vegetative cover. The additional cover and grading/drainage control, and vegetative cover will restrict infiltration of precipitation into the site reducing leachate (landfill liquids) production. This reduces the amount of leachate that needs to be pumped and treated from this site. There is also a requirement to secure this site from unauthorized access. The costs identified include acquiring fill for final cover, grading/drainage control, fencing, plantings, and signage, including associated engineering.

The expected life of this facility is 50 years.

With the 34 closed landfills in the City, there are occasions when there is a benefit to acquiring lands in proximity of these sites to provide additional buffer zones to minimize any impacts on adjacent private lands. There are also occasions when acquiring land would be beneficial to long term control, use, drainage works, or rehabilitation of a site. The cost identified includes the cost of acquiring land with associated administration costs.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

The remaining capacity at the Brady Road Landfill is approximately 100-150 years. The funding identified provides for annual cell excavations and related works to accommodate lateral expansion of the landfill. This involves excavating a below ground cell, constructing a natural clay or artificial liner and a leachate (landfill liquids) collection system at the base of the excavation. Filling with refuse then progresses within the cell in layers until the design height above ground has been achieved, by which time the next cell has been prepared. This is planned as an annual program.

The cost identified includes the cost of excavating and stockpiling excavated soil, constructing the liner, and installation of the leachate collection system, including associated engineering.

The expected life of this facility is 50 years.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

The existing leachate collection system at the former Summit Road Landfill site is over 20 years old. Similar leachate collection systems have been subjected to clogging problems in the past. It is important to keep this system functioning effectively to be able to keep leachate levels down and contained, therefore an assessment is required to determine the effectiveness of the system at the Summit Road Landfill. The funding proposed for 2012 will involve retaining an engineering consultant to conduct investigations at the site and provide a report on the condition of the leachate collection system and any rehabilitation work required. Funding for any rehabilitation work required as a result of the investigations will be included in future budgets.

WATER AND WASTE - SOLID WASTE DISPOSAL FUND

Project Name: **Closed Landfills Disposition Study**

The funding identified provides for an update of the 1993 study, which examined the disposition of the 34 closed landfills in Winnipeg, regarding landfill gas, groundwater and surface water contamination risk, and leachate (landfill liquids) conditions. In addition, this project would examine potential opportunities for beneficial end use of presently unused sites and the cost/benefit of removing the refuse and restoring candidate sites to near natural conditions.

Appendix 1: City of Winnipeg Profile

Winnipeg is the vibrant capital of Manitoba, located at the geographical centre of North America. Richly steeped in history, Winnipeg's multicultural birthplace is marked at the junction of the Red and the Assiniboine Rivers, now a green urban oasis known as The Forks. Recognized as the 2010 Culture Capital of Canada, Winnipeg is a mid-sized city of over 740,000 culturally diverse people, who bring a cosmopolitan, international flair to the city, as well as a warm welcoming spirit. The city's diverse cultural make-up shines brightly through its globally inspired cuisine, wide array of world-class arts, culture and festivals, many one-of-a-kind shops and trendy boutique, and widespread opportunity to experience the wonders of nature and breathtaking prairie scenery throughout the seasons.

The following are "Winnipeg Fast Facts".

LOCATION

Winnipeg lies at the geographic centre of North America. Winnipeg is the capital city of Manitoba, a resource-rich province of 1.2 million people bordered by Ontario to the east, Saskatchewan to the west, and North Dakota and Minnesota to the south. The city is just 100 km (62 miles) from the United States border and is the major Canadian centre closest to Mexico.

Winnipeg's history is the tale of a prime meeting place at the junction of two rivers – the north-flowing Red and the east-flowing Assiniboine. Winnipeg is a welcoming gateway, a centre of commerce and trade, a centre for arts and culture, with a rich history and growing economic opportunity.

DIVERSITY

Winnipeg has the most diverse economy of major cities in Canada. Key industries include: transportation and distribution, aerospace, agribusiness, finance and insurance, life sciences and biotechnology, information and communications technology, media, tourism, electric power, apparel, furniture and advanced manufacturing.

Winnipeg is also one of the most culturally diverse cities anywhere. Some 100 languages are represented in the region and Winnipeg is well known for its cultural achievements and flourishing arts scene.

Appendix 2: Cost Estimation Classification System

Class 5	Typical estimate methodology is judgment and not predicted precisely. (Concept Screening)		
Level of Project Definition	0 to 2%	Expected Accuracy	High: +30% to +100% Low: -20% to -50%

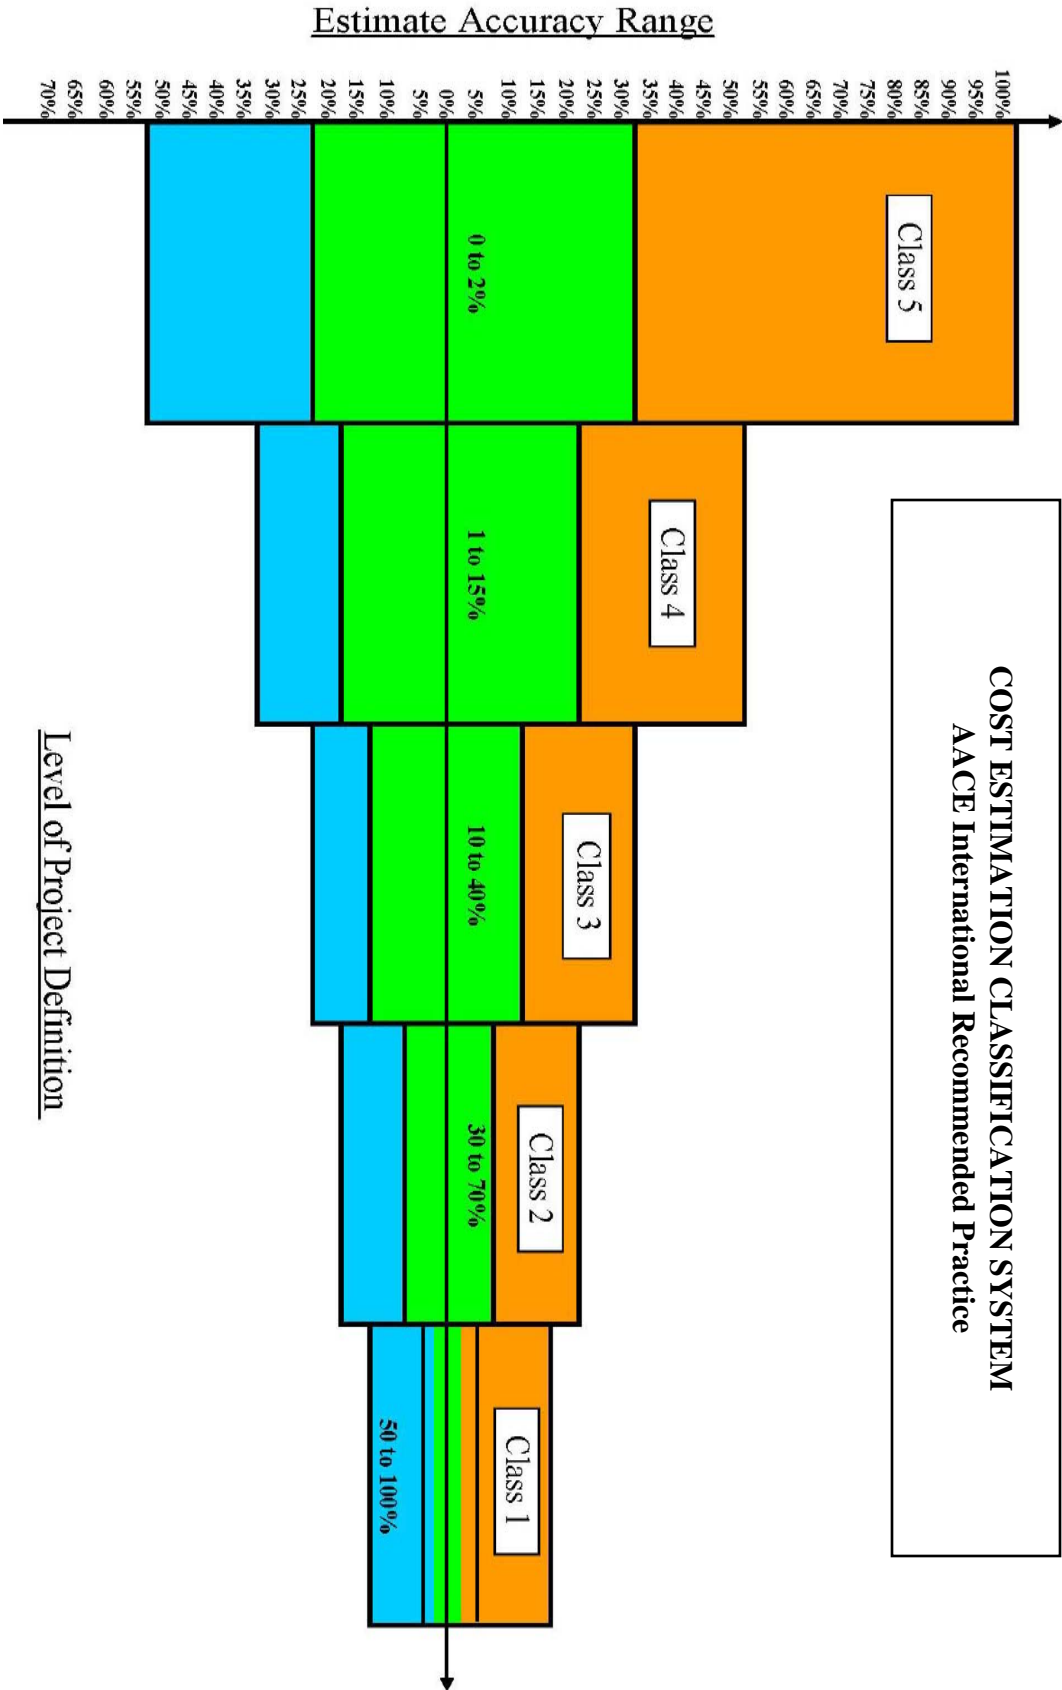

Class 4	Typical estimate methodology primarily judgment. (Concept Study or Feasibility)		
Level of Project Definition	1 to 15%	Expected Accuracy	High: +20% to +50% Low: -15% to -30%

Class 3	Typical estimate methodology is a mixture of deterministic and judgment but primarily judgmental. (Budget Authorization or Control)		
Level of Project Definition	10 to 40%	Expected Accuracy	High: +10% to +30% Low: -10% to -20%

Class 2	Typical estimate methodology is primarily deterministic. (Control or bid/tender)		
Level of Project Definition	30 to 70%	Expected Accuracy	High: +5% to +20% Low: -5% to -15%

Class 1	Typical estimate methodology is deterministic. (Check Estimate or bid / tender)		
Level of Project Definition	50 to 100%	Expected Accuracy	High: +3% to +15% Low: -3% to -10%

Based on Association for the Advancement of Cost Engineering (AACE)
International Recommended Practice No. 17R-97 Cost Estimating Classification
System.

Appendix 3: Capital Priority Rating System

The purpose of the Priority System is to provide a set of criteria by which proposed spending programs can be ranked in order of priority on a City-wide basis over the whole range of City functions and activities.

The System recognizes two basic factors, namely, priority of function (priority grouping) and degree of priority (sub-group rating).

		Priority Points	
Priority Groupings		Main	Sub
A.	<u>Vital Services</u>		5
	Those basic elements of essential services which are vital to the day to day domestic, industrial, and commercial life of the City. Capital expenditures within this group would be related to:		
	<ol style="list-style-type: none"> 1. Sewage Disposal Collection System and treatment facilities. 2. Water aqueduct reservoirs, pumping stations and trunk feeder mains 		
B.	<u>Essential Services</u>		3
	Those basic services characterized by a high degree of public necessity, convenience and safety. Capital expenditures within this group would be related to:		
	<ol style="list-style-type: none"> 1. Public Transportation 2. Fire and Police Protection 3. Garbage Collection and Disposal 4. Regional Street System 5. Land Drainage 		

Priority Groupings	Priority Points	
	Main	Sub
<p>C. <u>Standard Services</u> Those services which would reasonably be expected to be provided to all citizens of the City for their convenience and in accordance with generally accepted standards. Capital expenditures within this group would be related to:</p> <ol style="list-style-type: none"> 1. Residential Street and Lane Construction (Local Improvements or other). 	2	
<p>D. <u>Desirable Services</u> Those services having an aesthetic social, cultural, educational or entertainment value. Capital expenditures within this group would be related to:</p> <ol style="list-style-type: none"> 1. Parks and Related Facilities 2. Recreational Facilities 3. Libraries 4. Museums <p><u>Sub-Group Rating</u></p> <p>Could cause a serious imminent disruption of service (should be done without undue delay). 4</p> <p>Would extend or complete the expected usefulness and/or reliability of a facility (should not be delayed for more than 1 year). 3</p> <p>Would improve a facility which is at present sub-standard or approaching a high degree of obsolescence (should not be delayed for more than 2 years) 2</p> <p>Would qualify as a minimum sustaining program - desirable but not absolutely essential (could be delayed for 3 years or more). 1</p>	1	
<p>Note: A bonus of up to 2 points may be added to any of the subcategories 1 to 4 for projects that clearly contribute specifically to the City's declared development objectives.</p>		

Appendix 4: Public Private Partnership Payments as a Percentage of Cash to Capital/Gas Tax

<u>(In thousands of dollars)</u>	2011	2012	2013	2014	2015	2016
Public Private Partnership Payments:						
1 Charleswood Bridge	1,478	1,478	1,478	1,478	1,478	1,478
2 Police Building Replacement	891	2,074	3,449	3,449	3,449	3,450
3 Disraeli Bridge and Overpass Facility		7,700	19,800	19,800	19,800	19,800
4 Chief Peguis Trail - Henderson to Lagimodiere	2,444	8,284	8,284	8,284	8,284	8,284
Total	4,813	19,536	33,011	33,011	33,011	33,012
Less Manitoba Winnipeg Infrastructure Fund (2010 - 2019)	-	-	(5,000)	(5,000)	(5,000)	(5,000)
Net Public Private Partnership Payments	4,813	19,536	28,011	28,011	28,011	28,012
Financing Sources:						
1 Cash to Capital	67,478	69,478	71,478	73,478	75,478	77,478
2 Federal Gas Tax	40,450	41,050	40,450	40,450	40,450	40,450
Total Cash to Capital and Gas Tax	107,928	110,528	111,928	113,928	115,928	117,928
Payments as a Percentage of Cash to Capital and Gas Tax	4.46%	17.68%	25.03%	24.59%	24.16%	23.75%

Notes:

- 1 Public Private Partnership Payments include Annual Service/financing payments.
- 2 The Province of Manitoba announced an additional \$53.3 million over a ten-year period for roads funding to the City of Winnipeg, amending its contribution to the City under the Manitoba-Winnipeg Infrastructure Fund.
- 3 Estimated amounts for planned Public Private Partnerships are subject to change based on the final procurement process.

Appendix 5: Historical Analysis of Borrowing Authority, Financing Sources, Application of Funds

FINANCING SOURCES

Capital expenditures are funded from many sources besides debt. The following is a breakdown by the major categories for adopted capital budgets for 2006 to 2011.

	Adopted Capital Budgets (in Thousands of \$)					
	<u>2006¹</u>	<u>2007²</u>	<u>2008³</u>	<u>2009</u>	<u>2010⁶</u>	<u>2011</u>
CAPITAL AUTHORIZATIONS						
General (including Transit and Municipal Accommodations).	\$ 161,185	\$ 285,113	\$ 300,658	\$ 320,183	\$ 281,440	\$ 294,404
Local Improvements.	5,729	2,569	3,794	9,777	-	-
Utilities.	140,669	139,641	116,647	146,529	157,675	75,560
Special Operating Agencies.	-	-	-	-	415	150
TOTAL CAPITAL PROGRAM	307,583	427,323	421,099	476,489	439,530	370,114
LESS AVAILABLE FINANCING						
Cash to Capital.	56,000	59,478	61,078	63,478	65,478	67,478
Reserves / Other City Funding.	36,383	59,384	51,542	49,481	43,292	53,756
Retained Earnings.	23,500	29,120	52,120	37,989	29,567	42,010
Provincial Funding.	22,020	44,786	51,506	46,506	81,460	54,873
Federal Funding.	37,640	41,273	20,514	42,029	66,687	62,850
Provincial / Federal Funding.	31,798	5,713	5,187	59,246	21,539	-
Public Private Partnerships.	-	107,905	126,895	3,734	8,711	21,200
Other.	6,682	5,413	11,569	25,716	17,073	295

Notes:

- Budget as adopted by Council on February 21, 2006. No revisions made to reflect Council's March 21, 2006 decisions to increase cash to capital for 2006 to \$56.5 million, nor to increase authorization for Regional and Local Streets by \$1 million to reflect the tabling of the Provincial Budget.
- Revised to reflect January 24, 2007 Council decision to increase the Wastewater Renewal Program by \$3 million.
- Revised to reflect March 26, 2008 Council decision to reduce the previously adopted 2008 capital program and the internal financing requirement by \$400,000.
- Commencing in the 2011 Capital Budget, Land Drainage and Flood Control projects are no longer segregated into regional and residential.
- Civic Accommodations and Building Services have been amalgamated into a new division - Municipal Accommodations.
- Revised to reflect December 15, 2010 Council decision to create a new capital project for Canine Unit facility and that funding for this project be transferred from: (a) \$850,000 from the Police Radio 2010 capital budget; (b) \$300,000 from the Police Priority Dispatch system 2010 capital project; and (c) \$100,000 from the Winnipeg Police Service unspecified Capital Account.

Appendix 6: Statement of Current and Authorized Debenture Debt

The following information provides an overview of the City's authorized net debt as at December 31, 2010. The City issues both Sinking Fund and Serial or Instalment debentures for funding capital expenditures. On a consolidated basis, the City includes mortgages and bank loans incurred by wholly-owned corporations of the City, as well as public private partnership obligations and capital lease obligations, as outstanding debt of the City. The schedule below relates only to debenture debt for the City's tax-supported, utility operations, Transit and Municipal Accommodations Funds.

Beginning in 1998, the City adopted capital budgets that did not require the issuance of new tax supported debt (with the exception of local improvement costs to be repaid by taxpayers). As a result, the level of net tax-supported debt has decreased by \$328 million since 1998.

From 2009 forward Council has approved tax supported borrowing authority to address the City's infrastructure deficit. The infrastructure deficit represents the cost to raise the average condition of the City's infrastructure assets to an appropriate asset management condition. The cost to improve the City's infrastructure assets to average condition has been estimated at \$3.5 billion growing to \$7.4 billion over the next ten years.

Council adopted The City of Winnipeg Debt Management Policy to provide guidance surrounding debt financing and management decisions. The City recognized that the foundation of any well-managed debt program is a comprehensive debt policy. This Policy sets forth the parameters for issuing debt and managing outstanding debt and provides guidance to decision makers regarding the timing and purposes for which debt may be issued and the types of debt and structural features that may be incorporated.

Debenture Debt (In Thousands of \$)	Tax-Supported	Utility Operations and Other Funds	Combined Total
Gross Debenture Debt as at December 31, 2009	246,186	325,749	571,935
Less: Equity in Sinking Fund	(91,983)	(106,740)	(198,723)
